QUESTION 1

You are designing a Windows 7 virtual desktop infrastructure.

You have the following requirements:

What should you include in your design?

- A. Remote Desktop Gateway
- B. Windows Deployment Services
- C. Remote Desktop Connection Broker
- D. Windows Virtual PC and Windows XP Mode

Correct Answer: C

Remote Desktop Connection Broker (RD Connection Broker), formerly Terminal Services Session Broker (TS Session Broker), is used to provide users with access to RemoteApp and Desktop Connection. RemoteApp and Desktop Connection provides users a single, personalized, and aggregated view of RemoteApp programs, session-based desktops, and virtual desktops to users. RD Connection Broker supports load balancing and reconnection to existing sessions on virtual desktops, Remote Desktop sessions, and RemoteApp programs accessed by using RemoteApp and Desktop Connection. RD Connection Broker also aggregates RemoteApp sources from multiple Remote Desktop Session Host (RD Session Host) servers that may host different RemoteApp programs. QUESTION 2

Your company uses Microsoft Windows Server Update Services (WSUS) to deploy software updates and service packs. Microsoft releases a security update for Windows 7. You have the following requirements: The security update must be deployed by 5:00 P.M. on Friday. Computers that are off when the security update is deployed must install the security update as soon as they are turned on. You need to manage the software update process to meet the requirements. What should you do?

- A. Approve the security update for installation through the WSUS console with no deadline.
- B. Approve the security update for download through the WSUS console with a deadline of Friday at 5:00 P.M.
- C. Approve the security update for installation through the WSUS console with a deadline of Friday at 5:00 P.M.
- D. Approve the security update for download through the WSUS console with no deadline.

Correct Answer: C

Hints:

1.

question mention at friday 5pm

2.

question request install update in stead of download update

QUESTION 3

You are planning to test a custom image of Windows 7 Enterprise. You deploy the image on test computers in Toronto by using ConfigMgr.

The deployed image fails to activate.

You need to ensure that the image meets company activation requirements.

What should you do?

- A. Run the Sysprep /generalize command.
- B. Run the Sysprep /oobe command.
- C. Modify the unattend.xml file and enter a MAK key.
- D. Modify the unattend.xml file and enter a KMS key.

Correct Answer: A

QUESTION 4

Your network has 1,000 client computers that run Windows 7.

You need to install an application, in the Local System account context, on the client computers.

What are two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

- A. Configure a logon script.
- B. Configure a startup script.
- C. Configure a shutdown script.
- D. Configure a logoff script.

Correct Answer: BC

QUESTION 5

You have a single Active Directory domain. All domain controllers run Windows Server 2003 with Service Pack 1 (SP1).

You plan to store Windows BitLocker Drive Encryption recovery passwords in Active Directory.

You need to recommend the solution that uses the least amount of administrative effort.

What should you recommend?

- A. Upgrade the domain controller that has the role of operations master to Windows Server 2008 R2.
- B. Upgrade all domain controllers to Windows Server 2008 R2.
- C. Upgrade all domain controllers to Windows Server 2003 SP2.
- D. Extend the Active Directory schema.

Correct Answer: D

BitLocker Drive Encryption Configuration Guide: Backing Up BitLocker and TPM Recovery Information to Active Directory This section provides information about how BitLocker and TPM recovery information can be backed up in Active Directory. By default, no recovery information is backed up. Administrators can configure Group Policy settings to enable backup of BitLocker or TPM recovery information. Before configuring these settings, as a domain administrator you must ensure that the Active Directory schema has been extended with the necessary storage locations and that access permissions have been granted to perform the backup.
