QUESTION 1

You create a deployment image that must be tested in each office. You need to complete testing within a week to finalize the image for production. You need to recommend a deployment strategy to test the image with at least two users from each of the following departments: Finance Research Accounting Sales What should you recommend?

- A. Create a deployment share at each site. Direct the desktop technicians at each site to create Windows PE DVDs that install Windows 7 from the deployment share at each site.
- B. Create a deployment share in Los Angeles. Enable network boot at each site and have desktop technicians support users from each department.
- C. Create a deployment share in Los Angeles. Create a DVD installation disk and send one to each user from the Sales department. Have the desktop technicians at each site create DVD-based installations for users at each site.
- D. Create a deployment share at each site. Direct the desktop technicians at each site to create Windows PE USB flash drives that install Windows 7 from the deployment share at each site.

Correct Answer: C

QUESTION 2

All client computers in your network run Windows 7 Enterprise.

You need to prevent all standard user accounts from running programs that are signed by a specific publisher.

What should you do?

- A. Use AppLocker application control policies. Create an Executable rule.
- B. Use software restriction policies. Create a hash rule.
- C. Use AppLocker application control policies. Create a Windows Installer rule.
- D. Use software restriction policies. Create a path rule.

Correct Answer: A

<http://technet.microsoft.com/en-us/library/dd759068.aspx> The AppLocker Microsoft Management Console (MMC) snap-in is organized into four areas called rule collections. The four rule collections are executable files, scripts, Windows Installer files, and DLL files. These collections give the administrator an easy way to differentiate the rules for different types of applications. Rule conditions are criteria that the AppLocker rule is based on. Primary conditions are required to create an AppLocker rule. The three primary rule conditions are publisher, path, and file hash. Publisher - This condition identifies an application based on its digital signature and extended attributes. The digital signature contains information about the company that created the application (the publisher). The extended attributes, which are obtained from the binary resource, contain the name of the product that the application is part of and the version number of the application. The publisher may be a software development company, such as Microsoft, or the information technology department of your organization. Path - This condition identifies an application by its location in the file system of the computer or on the network. AppLocker uses path variables for directories in Windows. File hash - When the file hash condition is chosen, the system computes a cryptographic hash of the identified file.

QUESTION 3

Your company has a single Active Directory Domain Services (AD DS) domain and 1,000 client computers.

You are planning to deploy Windows 7 Enterprise to the client computers.

You need to design a zero-touch installation strategy.

What should you use in your design?

- A. custom Windows 7 image on DVD
- B. unattended installation
- C. Windows Deployment Services (WDS)
- D. Microsoft System Center Configuration Manager 2007 R2

Correct Answer: D

Microsoft Deployment Toolkit (MDT) 2010 is a Microsoft solution accelerator available at no cost for deploying Windows operating systems. Based on the experience of Microsoft employees, partners, and customers, MDT 2010 contains many thousands of lines of code--code that provides a deployment framework so that customers can focus on their business, not on programming. Integrating MDT 2010 with Configuration Manager 2007 R2 helps large organizations use this framework to more easily implement the Zero-Touch, High-Volume Deployment strategy. Benefits of integrating MDT 2010 with Configuration Manager 2007 R2 in the Zero-Touch, High-Volume Deployment strategy include:

- Streamlined deployment, because installation is fully automated without interaction.
 - Lower support costs, because configurations are consistent across all client computers.
 - Streamlined maintenance, because Configuration Manager 2007 R2 handles applications, device drivers, and updates.

-

QUESTION 4

All client computers in a company run Windows 7 Enterprise. The company creates Windows PowerShell scripts to collect statistical data from client computers. A logon script is configured to run the PowerShell scripts during logon.

An error occurs when the scripts are run on client computers.

You need to ensure that all PowerShell scripts run correctly.

Which command should you use? (To answer, drag the appropriate component from the list of components to the correct location or locations in the work area.)

Select and Place:

Answer Choices:

- Bypass
- AllSigned
- Restricted
- RemoteSigned
- Get-ExecutionPolicy
- Set-ExecutionPolicy
- Set-AuthenticodeSignature

Answer Area:

```
Administrator: Windows PowerShell  
PS C:\Windows\System32> Set-ExecutionPolicy Bypass
```

Correct Answer:

Answer Choices:

- AllSigned
- Restricted
- RemoteSigned
- Get-ExecutionPolicy
- Set-AuthenticodeSignature

Answer Area:

```
Administrator: Windows PowerShell  
PS C:\Windows\System32> Set-ExecutionPolicy Bypass
```

QUESTION 5

All client computers in your network run Windows 7 with default firewall settings. You have a server-based application that requires an agent to be installed on all client computers.

You need to use Group Policy to allow the application to initiate installation of the agent on all client computers.

What should you do?

- A. Create inbound program rules.
- B. Create inbound port rules.
- C. Create Windows service hardening rules.
- D. Create connection security rules.

Correct Answer: B

hints:

software havent install, so unable to block program
