QUESTION 1

You are designing a Windows 7 Enterprise custom image. You create an autounattend.xml file by using Windows System Image Manager (SIM). This file will be used when the image is deployed.

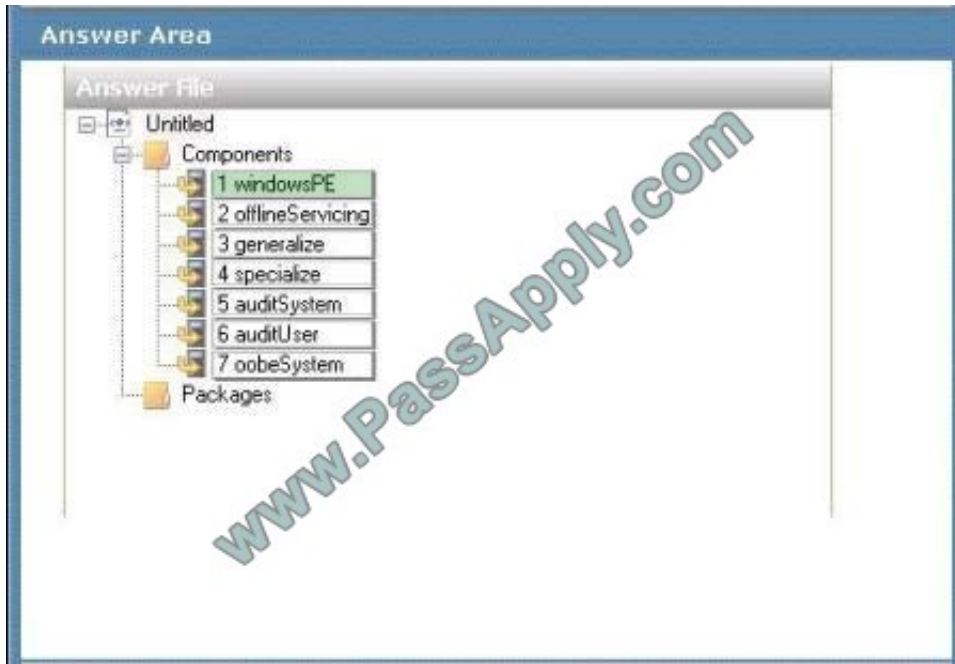

You are planning to install Windows 7 on a second hard disk in a computer. You configure the DiskID setting.

You need to select the configuration pass where you will add the DiskID setting.

Which option should you select? To answer, select the appropriate setting or settings in the work area.

Correct Answer:

QUESTION 2

Your company has 1,000 client computers. Each client computer has 1 GB of RAM.

You are planning to deploy Windows 7 Enterprise.

You need to design a zero-touch deployment strategy to increase the number of client computers that can be imaged at one time.

What should you do?

- A. Increase the amount of RAM on the client computers.
- B. Change from unicast to multicast deployment of images.
- C. Change from multicast to unicast deployment of images.
- D. Decrease the trivial file transfer protocol (TFTP) block size on the TFTP server.

Correct Answer: B

Performing Multicast Deployments In order to deploy an image using multicasting instead of unicasting, you must first create a multicast transmission. Multicast transmissions make the image available for multicasting, which enables you to deploy an image to a large number of client computers without overburdening the network. When you deploy an image using multicasting, the image is sent over the network only once, which can drastically reduce the amount of network bandwidth that is used. QUESTION 3

Your company plans to upgrade 1,000 client computers to Windows 7.

The company uses a custom line-of-business application that is frequently updated.

The application is not compatible with Windows 7.

You need to ensure that the company can use the application.

You also need to ensure that the application can be updated with the least amount of administrative effort.

What should you do?

- A. Deploy Microsoft Enterprise Desktop Virtualization (MED-V) v2 to all Windows 7 client computers, and distribute the virtual machine image and updates through MED-V TrimTransfer.
- B. Deploy Microsoft Enterprise Desktop Virtualization (MED-V) v2 to all Windows 7 client computers, and distribute the virtual machine image and updates through Microsoft System Center Configuration Manager.
- C. Configure Windows XP Mode on all Windows 7 client computers, and distribute the virtual machine image and updates through a file share resource.
- D. Configure Windows XP Mode on all Windows 7 client computers, and distribute the virtual machine image and updates through Microsoft System Center Configuration Manager.

Correct Answer: B

QUESTION 4

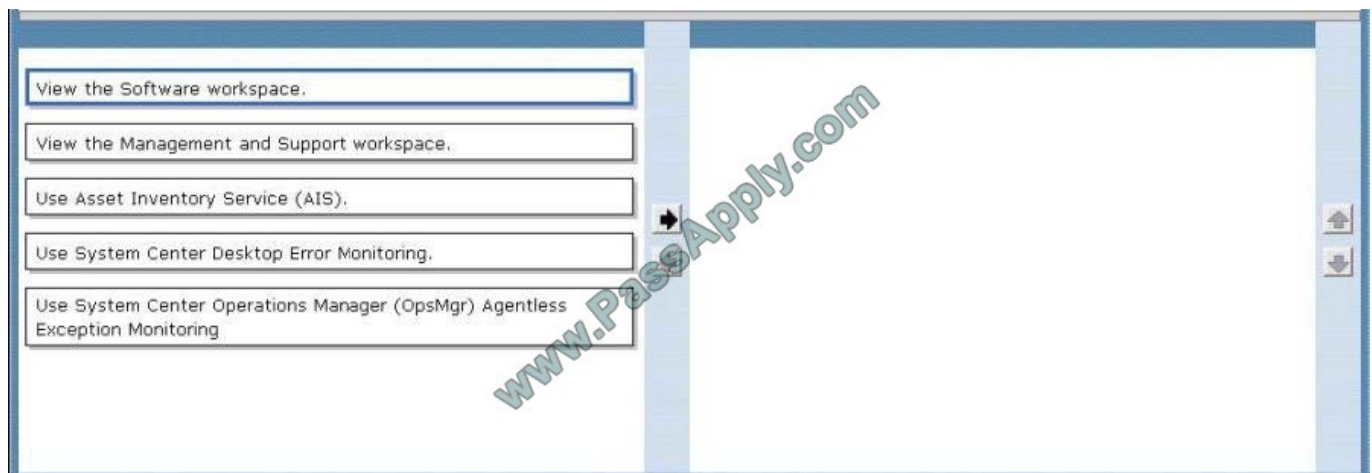

You upgrade all of an organization's client computers to Windows 7.

After the upgrade, a specific legacy application does not function correctly.

You need to generate a list of all the computers that have the legacy application installed.

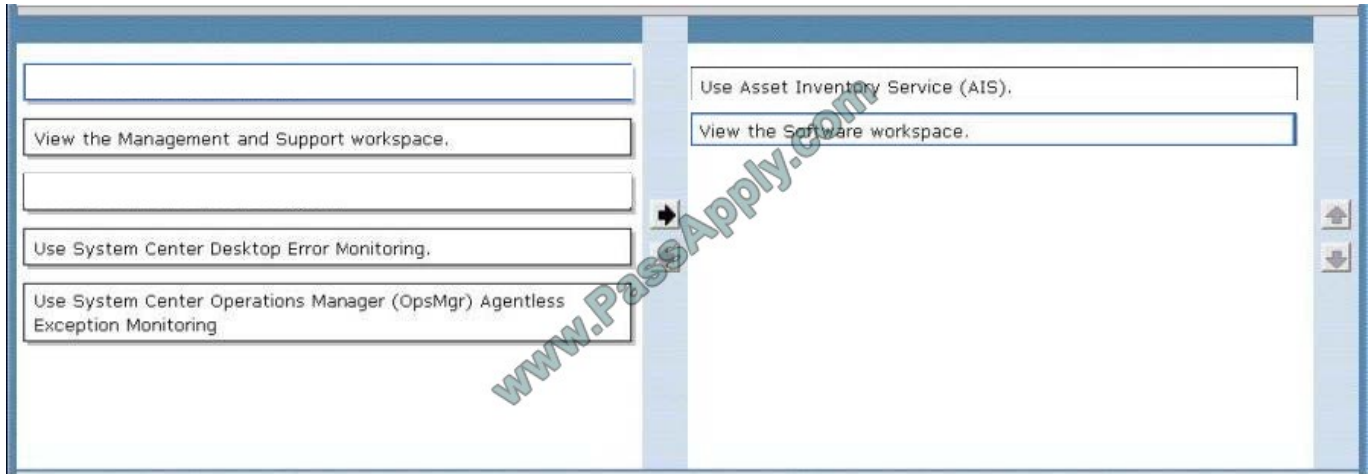

Which two actions should you perform? (To answer, move the appropriate action from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Correct Answer:

QUESTION 5

Your company's network is shown in the following diagram.

Each office is connected to the Internet through a high-bandwidth connection. The branch offices are connected to the core network through low-bandwidth connections.

Microsoft Windows Server Update Services (WSUS) must provide software updates for all offices.

You need to design the WSUS infrastructure to minimize traffic over the low-bandwidth connections.

Which two actions should you perform? (Each correct answer presents part of the solution.

Choose two.)

- A. Deploy BranchCache on the WSUS server and client computers
- B. Configure WSUS to use updates that are stored locally
- C. Configure WSUS to use updates that are stored on Microsoft Update
- D. Deploy Quality of Service (QoS) on the WSUS server and client computers
- E. Deploy WSUS servers in the branch offices

Correct Answer: CE

WSUS update from Microsoft update is faster then core network Deploy WSUS servers in each branch office in order to provide WSUS server for branch client. hints:

1.

Each office is connected to the Internet through a high-bandwidth connection.

2.

The branch offices are connected to the core network through low-bandwidth connections.
