### QUESTION 2

You administer Windows 8 Enterprise client computers in your company network.

You change settings on a reference computer by using the Windows Firewall with Advanced Security tool. You want to apply the same settings to other computers. You need to save the windows Firewall with Advanced Security configuration

settings from the reference computer. You also need to be able to import the configuration settings into a Group Policy object later.

What should you do?

- A. Open Local Group Policy Editor, select the Local Policies node, and then select the Export List action.
- B. Open Local Group Policy Editor, select the Security Settings node, and then select the Export List action.
- C. Run the `netshadvfirewall export c:\settings.wfw` command.
- D. Run the `netshadvfirewall export c:\settings.xml` command.

Correct Answer: C

\*

Netshadvfirewall is a command-line tool for Windows Firewall with Advanced Security that helps with the creation, administration, and monitoring of Windows Firewall and IPsec settings and provides an alternative to console-based management. T

\*

Export subcommand Exports the Windows Firewall with Advanced Security configuration in the current store to a file. This file can be used with the import command to restore the Windows Firewall with Advanced Security service configuration to a store on the same or to a different computer.

Syntax export [ Path ] FileName

Parameters [ Path ] FileName Required. Specifies, by name, the file where the Windows Firewall with Advanced Security configuration will be written. If the path, file name, or both contain spaces, quotation marks must be used. If you do not specify Path then the command places the file in your current folder. The recommended file name extension is .wfw.

Example In the following example, the command exports the complete Windows Firewall with Advanced Security service configuration to the file C:\temp\wfas.wfw. export c:\temp\wfas.wfw

### QUESTION 3

A company has client computers that run Windows 8. Each computer has two hard drives.

You need to create a dynamic volume on each computer that maximizes write performance with data fault tolerance.

Which kind of dynamic volume should you create?

- A. Striped Volume
- B. RAID 5 Volume
- C. Spanned Volume
- D. Mirrored Volume

Correct Answer: D

---

### QUESTION 4

A company has an Active Directory Domain Services (AD DS) domain. All client computers run Windows 8.

A notification appears when domain users change Windows settings and when applications try to make changes to client computers.

You need to ensure that a notification appears only when an application tries to make changes to the computer.

What should you do?

- A. Configure the Notification Area Icons settings on the client computers.
  - B. Create a Group Policy object (GPO) that enables the Admin Approval Mode for the built-in Administrator account policy.
  - C. Configure the User Account Control (UAC) settings on the client computers.
  - D. Create a Group Policy object (GPO) that disables the Run all administrators in Admin Approval Mode policy.
-

Correct Answer: C

---

#### QUESTION 5

A company has 100 client computers that run various editions of Windows 7. The company plans to upgrade or replace computers so that all client computers run an edition of Windows 8.1.

The company plans to use the following programs and features on the Windows 8 computers:

32-bit and 64-bit software

Desktop apps

Windows Media Player

Storage Spaces

You need to identify the installation or upgrade paths that support the programs and features.

Which three paths meet the requirements? (Each correct answer presents a complete solution. Choose three.)

- A. Purchase hardware with Windows RT pre-installed.
- B. Perform a clean installation of Windows RT.
- C. Perform a clean installation of Windows 8.1 Pro.
- D. Perform a clean installation of Windows 8.1.
- E. Upgrade from Windows 7 Enterprise to Windows 8.1 Enterprise.

Correct Answer: CDE
