QUESTION 1

Your company has several Windows RT 8.1 devices. The devices connect to Exchange Online in Microsoft Office 365 and to Windows Intune for device management.

Setting name	Local device setting	Windows Intune setting	Exchange Online setting
Require a password to unlock mobile devices	Not configured	Yes	No
Required password type	Not configured	Alphanumeric	Numeric
Minimum password length	Not configured	10	12
Allow simple passwords	Not configured	No	Yes
Minutes of inactivity before device screen is locked	Not configured	10	5

The security policies of Office 365 and Windows Intune are configured as shown in the following table.

You need to identify the effective settings on the Windows RT devices.

What should you identify? (To answer, select the appropriate effective configuration for each setting in the answer area.)

Answer Area

Require a password to unlock mobile devices:

Required password type:

Minimum password length:

Allow simple passwords:

Minutes of inactivity before device screen is locked:

Hot Area:

Answer Area

Require a password to unlock mobile devices:

Yes
No
Not configured

Required password type:

Alphanumeric
Numeric
Not configured

Minimum password length:

10
12
Not configured

Allow simple passwords:

Yes
No
Not configured

Minutes of inactivity before device screen is locked:

5
15
Not configured

Correct Answer:

Answer Area

Require a password to unlock mobile devices:

Yes
No
Not configured

Required password type:

Alphanumeric
Numeric
Not configured

Minimum password length:

10
12
Not configured

Allow simple passwords:

Yes
No
Not configured

Minutes of inactivity before device screen is locked:

5
15
Not configured

QUESTION 2

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

You support Windows 8.1 Enterprise desktop computers and tablets. All of the computers are able to connect to your company network from the Internet by using DirectAccess.

Your company wants to deploy a new application to the tablets. The deployment solution must meet the following requirements:

The application is stored locally on the tablets. Access to the application is protected with extra logon credentials, in addition to a standard domain account used by users.

The application utilizes the least amount of network bandwidth. The application must maintain access to the current desktop. You need to deploy the new application to the tablets.

What should you do?

- A. Deploy the application as an Application Virtualization (App-V) package. Install the App- V 4.6 client on the tablets.
- B. Deploy the application as a published application on the Remote Desktop server. Create a Remote Desktop connection on the tablets.
- C. Install the application on a local drive on the tablets.
- D. Install the application in a Windows To Go workspace.
- E. Install Hyper-V on tablets. Install the application on a virtual machine.
- F. Publish the application to Windows Store.
- G. Install the application within a separate Windows 8.1 installation in a virtual hard disk (VHD) file. Configure the tablets with dual boot.
- H. Install the application within a separate Windows 8.1 installation in a VHDX file. Configure tablets with dual boot.

Correct Answer: E

Explanation: With Hyper-V the application is run locally in virtualized environment. The Hyper-V environment can be set up to require extra authentication. Reference: Hyper-V

QUESTION 3

You are a systems administrator for Contoso; Ltd. All client computers run Windows 8 and are members of the contoso.com Active Directory domain. Users log on to their computers by using domain user accounts.

Contoso develops an internal line of business (LOB) Windows Store app. You want to deploy the LOB app to the client computers and configure the app to access various resources in the domain.

You need to enable all users to run the LOB app and access the required resources from the LOB app.

What should you do?

- A. Certify the LOB app with Windows Store. Ask users to log on to their computers by using a Microsoft Account. Install the LOB app from Windows Store. Ask users to log off, and then log back on in by using their domain accounts.
- B. Restart each computer by using WinPE. From WinPE, copy all of the LOB app executable files in the Program Files folder. Restart into Windows 8 and ask users to log on by using their domain accounts.
- C. Use the DISM utility to include the LOB app in a new Windows 8 image. Reimage the computers with the new image. Join the computers to a new workgroup. Ask each user to log on to the computer by using a new Microsoft Account that ends with @contoso.com.
- D. Configure the Allow all trusted apps to install policy settings for all computers. Ask users to log on by using their domain accounts, and then execute a PowerShell script that includes the add-appxpackage cmdlet.

Correct Answer: A

QUESTION 4

Your network contains client computers that run Windows 8 Enterprise. The computers are members of an Active Directory domain.

Your company purchases a subscription to Windows Intune.

Synchronization between Active Directory and Windows Intune is not configured.

You enroll all of the computers in Windows Intune.

You plan to create groups that contain the computers by using dynamic membership.

You need to identify which criteria you can use to populate the groups dynamically.

Which three criteria should you identify? (Each correct answer presents a complete solution. Choose three.)

- A. organizational unit (OU)
- B. manager
- C. security group
- D. device type
- E. domain

Correct Answer: ABC

Explanation: Windows Intune Dynamic membership query criteria include:

Security group

Manager

Organizational unit (OU)

Note:

*

A group can have direct members (static membership), dynamic query-based members, or both. When you create a dynamic membership query, you define the criteria that determines the query that Windows Intune runs to retrieve the list of group members. The group is automatically updated with members that meet the criteria whenever changes occur. You can also create groups that have static membership lists. These are groups that you manually define by explicitly adding members.

*

Windows Intune is a Microsoft cloud-based management solution. Intune is primarily aimed at small and medium enterprises and service providers who want to manage up to 500 Microsoft Windows computers. Distribution is through a subscription system in which a fixed monthly cost is incurred per PC. The minimum subscription duration is one year. Included in the package is the Windows operating system, currently Windows 8 Enterprise.

QUESTION 5

You have a Windows 8.1 Enterprise client computer named Computer1. The Storage Spaces settings of Computer1 are configured as shown in the following exhibit. (Click the Exhibit button.)

You plan to create a three-way mirror storage space in the storage pool and to set the size of the storage space to 50 GB.

You need to identify the minimum number of disks that must be added to the storage pool for the planned mirror.

How many disks should you identify?

- A. 1
- B. 3
- C. 4
- D. 5

Correct Answer: B

Explanation: In Windows Server 2012 Storage Spaces and Windows 8 Storage Spaces, a 2-way mirror requires at least 2 physical disks. However, a 3-way mirror requires at least 5 physical disks.

The reason is that a 3-way mirror uses a quorum. In order to keep running, the mirror space must keep over 50% of the disks functioning. So a 3-way mirror must have at least 5 physical disks to be able to survive the loss of up to 2 physical disks. http://blogs.technet.com/b/tip_of_the_day/archive/2013/08/29/tip-of-the-day-3-way-mirrors.aspx Reference: <http://www.eightforums.com/tutorials/4203-storage-spaces-create-new-pool-storage-space-windows-8-a.html>
