QUESTION 1

A computer currently runs a 64-bit version of Windows 7 Enterprise.

You need to deploy a 64-bit version of Windows 8 Pro to the computer. The new deployment must not affect the Windows 7 installation on the computer.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

- Select the installation option to delete each partition on the hard drive.
- Start the computer from the Windows 8 installation media.
- Using Windows Explorer, run the setup program from the Windows 8 installation media.
- Select the **Custom** installation option.
- Select the **Upgrade** installation option.
- In Disk Management, shrink the current hard drive partition.

Correct Answer:

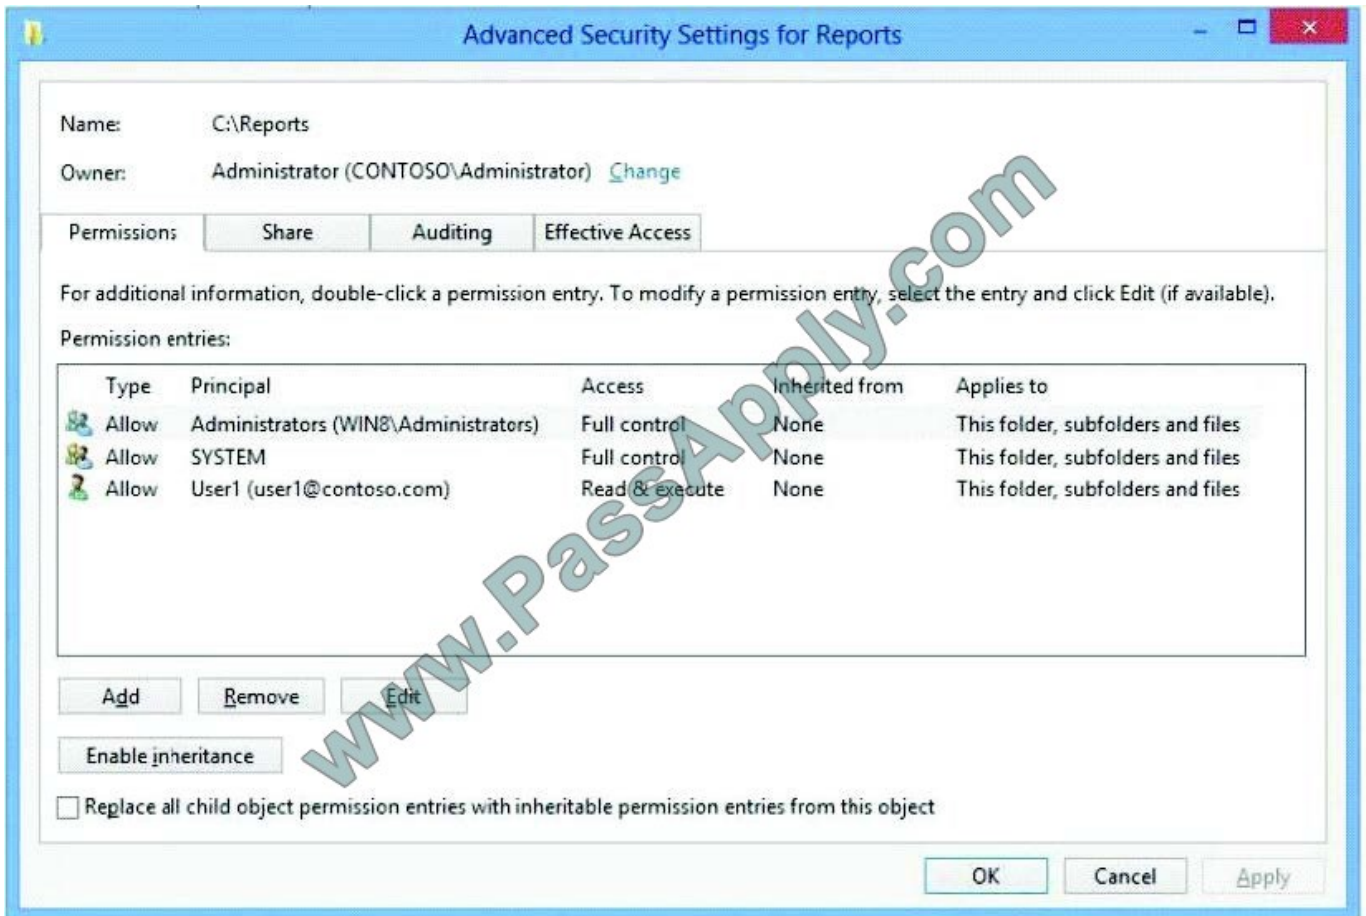

- | | |
|--|--|
| Select the installation option to delete each partition on the hard drive. | In Disk Management, shrink the current hard drive partition. |
| | Start the computer from the Windows 8 installation media. |
| Using Windows Explorer, run the setup program from the Windows 8 installation media. | Select the Custom installation option. |
| | |
| Select the Upgrade installation option. | |

QUESTION 2

You administer a computer that runs Windows 8 Enterprise and is a member of an Active Directory domain.

You create a folder named C:\Reports and assign NTFS permissions as shown in Exhibit 1. (Click the Exhibit button.)

You share the folder over the network with Read permission for a domain user account named User1 as shown in Exhibit 2. (Click the Exhibit button.)

You want to provide access to the shared folder only for the time that User1 is a member of the domain security group named Project.

You need to assign the required permissions.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Answer Area

- Add a condition for a user group.
- Open the permission entry for User1.
- Add a condition for a device group.
- Click **Share**.
- Add the Project security group and grant it Read permission.
- Open the Sharing tab from the folder properties window.
- Open advanced security settings for the folder.

Correct Answer:

Answer Area

Open the Sharing tab from the folder properties window.

Click **Share**.

Add the Project security group and grant it Read permission.

Open advanced security settings for the folder.

Share Folders From 'Users Profile' Locations and Local Drives If you want to quickly share a folder residing in local drives or User Profile folders, open Properties dialog from right-click context menu, and then head over to Sharing tab. From Network File and Folder Sharing section, click Share to open File Sharing dialog. Now, select Everyone from drop-down menu, and click Add.

Project Files Properties

General Sharing Security Customize

Network File and Folder Sharing

Project Files Shared

Network Path: \\USMAN-PC\Users\Usman\Desktop

Share...

Advanced Sharing

Set custom permissions, create multiple advanced sharing options.

Advanced Sharing...

Password Protection

People without a user account and can access folders shared with everyone.

To change this setting, use the Network and Sharing Center.

Close

File Sharing

Choose people to share with

Type a name and then click Add, or click the arrow to find someone.

Everyone Add

Guest Usman Everyone Level

Create a new user...

I'm having trouble sharing

Share Cancel

This will add Everyone group in File Sharing list, and allow you to change folder access permission.

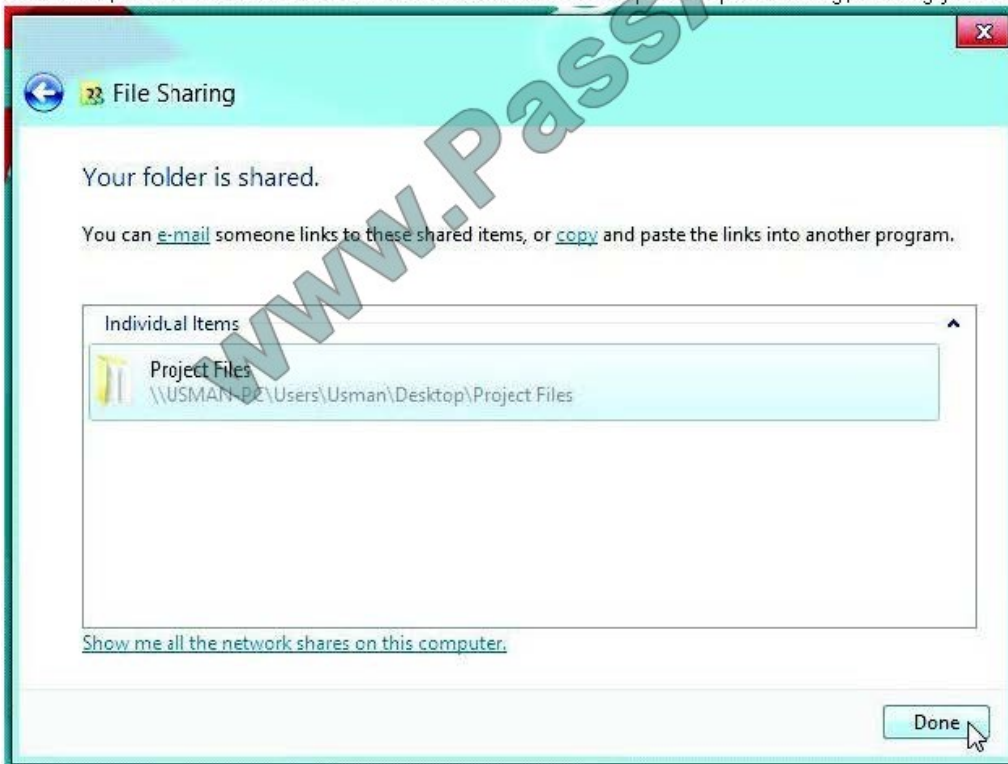

Using Read pull-down menu, you can give read and write permissions to users, and remove Everyone group from the

File Sharing list.

Once done, click **Share** to share the folder on the network. It will open a separate dialog, allowing you to email and copy the shared folder link.

Once done, click **Share** to share the folder on the network. It will open a separate dialog, allowing you to email and copy the shared folder link.

Now, you can access the shared folder from any PC connected on the network.

QUESTION 3

You support desktop computers and tablets that run Windows 8 Enterprise. All of the computers are able to connect to your company network from the Internet by using DirectAccess.

Your company wants to deploy a new application.

The deployment solution must meet the following requirements:

The application does not utilize the company server infrastructure.

The application is isolated from other applications.

The application uses the least amount of disk space possible on a solid-state drive (SSD) on the tablets.

The application utilizes the least amount of network bandwidth.

You need to deploy the new application to the tablets.

What should you do?

- A. Deploy the application as an Application Virtualization (App-V) package. Install the App-V 4.6 client on the tablets.
- B. Deploy the application as a published application on the Remote Desktop server. Create a Remote Desktop connection on the tablets.
- C. Install the application on a local drive on the tablets.
- D. Install the application in a Windows To Go workspace.
- E. Install Hyper-V on tablets. Install the application on a virtual machine.
- F. Publish the application to Windows Store.
- G. Install the application within a separate Windows 8 installation in a virtual hard disk (VHD) file. Configure the tablets with dual boot.
- H. Install the application within a separate Windows 8 installation in a VHDX file. Configure tablets with dual boot.

Correct Answer: D

Windows To Go is not a late-night drive-through offering at the local Microsoft Store. Rather, it's a feature in the Windows 8 Enterprise operating system that allows you to start a Windows 8 image (a Windows To Go workspace) from an external USB drive. You can start a Windows To Go workspace on most computers that meet the Windows 7 or Windows 8 certification requirements, regardless of the operating system currently running on them.

QUESTION 4

You administer Windows 8.1 computers for a software development company.

The marketing department is going to meet a potential customer to demonstrate the product. You want to configure a laptop that has a stand-alone virtual machine that runs Windows 8.1 Enterprise and the latest build of your software.

You need to enable BitLocker on the system drive of the virtual machine.

What should you do first?

- A. Join the virtual machine to an Active Directory Domain Services (AD DS) domain.
- B. Activate Windows.
- C. Turn on the Require additional authentication at startup local policy.
- D. Turn off the Require additional authentication at startup local policy.

Correct Answer: C

QUESTION 5

You administer computers that run Windows 8 Enterprise in an Active Directory domain. Your company has purchased a subscription to Windows Intune.

Users access a Microsoft Exchange environment by using the Mail tile. The Microsoft Exchange environment is connected to Windows Intune. Company security policy defines the minimum length of passwords and required encryption settings.

You need to create a Windows Intune policy that meets the security policy requirements. What should you do?

- A. Create a new Windows Intune Mobile Security policy.
- B. Create a new Windows Firewall Settings policy.
- C. Create a new Windows Intune Center Settings policy.
- D. Create a new Windows Intune Agent Settings policy.

Correct Answer: A

Configure Your Windows Intune Environment

Reference: <http://technet.microsoft.com/en-us/library/hh441722.aspx> To set up the default Windows Intune Policies:

1.

Open the Windows Intune administrator console.

2.

In the workspace shortcuts pane, click the Policy icon.

3.

Under Tasks, click Add Policy.

4.

In the Create a New Policy dialog box, the following policy templates are displayed in the list of templates in the left pane: Mobile Device Security Policy Windows Firewall Settings Windows Intune Agent Settings Windows Intune Center
