QUESTION 1

You administer Windows 8.1 Enterprise computers in an Active Directory domain. Your company has purchased a subscription to Windows Intune.

Users access a Microsoft Exchange environment by using the Mail tile. The Microsoft Exchange environment is connected to Windows Intune. Company security policy defines the minimum length of passwords and required encryption

settings.

You need to create a Windows Intune policy that meets the security policy requirements.

What should you do?

A. Create a new Windows Intune Agent Settings policy.

B. Create a new Windows Intune Mobile Security policy.

C. Create a new Windows Firewall Settings policy.

D. Create a new Windows Intune Center Settings policy.

Correct Answer: B

QUESTION 2

You have several client computers that run Windows 7 Enterprise.

You plan to configure the computers to dual-boot to Windows 8.1 Enterprise by using a native-boot VHD.

You have a VHD file that contains an installation of Windows 8.1 Enterprise,

You need to inject several device drivers into the VHD file.

Which tool should you use?

A. Bcdedit

B. Bcdboot

C. Pkgmgr

D. Dism

Correct Answer: D

Explanation: Deployment Image Servicing and Management (DISM) is a command-line tool used to service Windows?images offline before deployment. You can use it to install, uninstall, configure, and update Windows features, packages,

drivers, and international settings. Subsets of the DISM servicing commands are also available for servicing a running operating system.

DISM is installed with Windows?7, and it is also distributed in the Windows OEM Preinstallation Kit (Windows OPK) and the Windows Automated Installation Kit (Windows AIK). It can be used to service Windows Vista?with Service Pack 1

(SP1), Windows Server?2008, Windows?7, Windows Server?2008 R2, or Windows PE images. DISM replaces several Windows OPK tools, including PEimg, Intlcfg, and Package Manager.

http://technet.microsoft.com/en-us/library/dd744256%28v=WS.10%29.aspx Reference: http://social.technet.microsoft.com/wiki/contents/articles/516.how-to-boot-from- a-vhd.aspx#Add http://technet.microsoft.com/en-us/library/cc749465%28v=WS.10%29.aspx Package Manager (Pkgmgr.exe) installs, uninstalls, configures, and updates features and packages for Windows Vista. You can install or update Windows Vista feature packages on an offline destination computer by using Package Manager

and an unattended installation answer file. http://technet.microsoft.com/en-us/library/hh824874.aspx BCDboot can update an existing boot environment on the system partition: http://technet.microsoft.com/en-us/library/cc709667%28v=WS.10%29.aspx BCDEdit is a command-line tool for managing BCD stores. It can be used for a variety of purposes, including creating new stores, modifying existing stores, adding boot menu options, and so on. BCDEdit serves essentially the same purpose

as Bootcfg.exe on earlier versions of Window

QUESTION 3

Your network contains an Active Directory domain and 100 Windows 8.1 client computers.

All software is deployed by using Microsoft Application Virtualization (App-V) 5.0.

Users are NOT configured as local administrators,

Your company purchases a subscription to Microsoft Office 365 that includes Office 365 ProPlus.

You need to create an App-V package for Office 365 ProPlus.

What should you do?

A. Run the Office Customization Tool (OCT), run the App-V Sequencer and then run Setup /Packager.

B. Download the Office Deployment Tool for Click-to-Run, run the App-V Sequencer and then run Setup /Ad mm.

C. Download the Office Deployment Tool for Click-to-Run, run Setup /Download and then run Setup /Packager.

D. Run the Office Customization Tool (OCT), run Setup /Download and then run the App-V Sequencer.

Correct Answer: C

QUESTION 4

You are a system administrator for a local construction company. The company uses Windows 8.1 Pro desktop and laptop computers. All desktop computers have a 160 GB disk drive.

You receive a call from a user who needs to a recover an .avi file from file history but discovers that the file no longer exists. The user reports recently deleting a large PowerPoint presentation from the hard drive.

The user\\'s File History configuration is displayed in the graphic below:

Use the drop-down menus to select the answer choice that completes each statement. Each correct selection is worth one point.

Hot Area:

Answer Area

The user is unable to restore the file because **[answer choice]**

- .avi files are not supported by default.
- the cache filled up with the PowerPoint file deletion.
- the retention period for the file had been exhausted.

A document that you created 30 minutes ago can be recovered
[answer choice]

- always.
- never.
- sometimes.

Correct Answer:

Answer Area

The user is unable to restore the file because [**answer choice**]

.avi files are not supported by default.
the cache filled up with the PowerPoint file deletion.
the retention period for the file had been exhausted.

A document that you created 30 minutes ago can be recovered [**answer choice**]

always.
never.
sometimes.

QUESTION 5

You administer Windows 8.1 Enterprise computers in your company network. You provide remote employees with a Windows To Go workspace.

A remote employee informs you that his workspace requires activation.

You need to activate the workspace.

What should you do?

A. Instruct the employee to run Windows Update from the workspace.

B. Instruct the employee to connect to the company network from the workspace by using VPN.

C. Instruct the employee to run the slmgr /upk command from the workspace.

D. Give the employee a Multiple Activation Key (MAK).

Correct Answer: B

Explanation: http://technet.microsoft.com/en-us/library/ jj592680.aspx#wtg_faq_roamact Windows To Go: Frequently Asked Questions

Do I need to activate Windows To Go every time I roam?

No, Windows To Go requires volume activation; either using the Key Management Service (KMS) server in your organization or using Active Directory based volume activation. The Windows To Go workspace will not need to be reactivated

every time you roam. KMS activates Windows on a local network, eliminating the need for individual computers to connect to Microsoft. To remain activated, KMS client computers must renew their activation by connecting to the KMS host on

periodic basis. This typically occurs as soon as the user has access to the corporate network (either through a direct connection on- premises or a through remote connection using DirectAccess or a virtual private network connection), once

activated the machine will not need to be activated again until the activation validity interval has passed. In a KMS configuration the activation validity interval is 180 days.

Further Information: http://technet.microsoft.com/en-us/ library/dn502540.aspx Slmgr.vbs Options for Volume Activation

Table 2. Slmgr.vbs command-line options

/upk [ActivationID]

This option uninstalls the product key of the current Windows edition. After a restart, the system will be in an Unlicensed state unless a new product key is installed. Optionally, you can use the [Activation ID] parameter to specify a different

installed product. This operation must be run from an elevated command prompt.
