QUESTION 1

Your network contains Windows 8.1 Enterprise client computers. The computers are members of an Active Directory domain.

Your company purchases a subscription to Windows Intune. Synchronization between Active Directory and Windows Intune is not configured.

You enroll all of the computers in Windows Intune.

You plan to create groups that contain the computers by using dynamic membership.

You need to identify which criteria you can use to populate the groups dynamically.

Which three criteria should you identify? (Each correct answer presents a complete solution. Choose three.)

- A. organizational unit (OU)
- B. manager
- C. security group
- D. device type
- E. domain

Correct Answer: ABC

Explanation: Windows Intune Dynamic membership query criteria include:

Security group

Manager

Organizational unit (OU)

Note:

*

A group can have direct members (static membership), dynamic query-based members, or both. When you create a dynamic membership query, you define the criteria that determines the query that Windows Intune runs to retrieve the list of group members. The group is automatically updated with members that meet the criteria whenever changes occur. You can also create groups that have static membership lists. These are groups that you manually define by explicitly adding members.

*

Windows Intune is a Microsoft cloud-based management solution. Intune is primarily aimed at small and medium enterprises and service providers who want to manage up to 500 Microsoft Windows computers. Distribution is through a subscription system in which a fixed monthly cost is incurred per PC. The minimum subscription duration is one year. Included in the package is the Windows operating system, currently Windows 8 Enterprise.

QUESTION 2

You administer Windows 8.1 Enterprise computers in your company network. You provide remote employees with a Windows To Go workspace.

A remote employee informs you that his workspace requires activation.

You need to activate the workspace.

What should you do?

- A. Instruct the employee to run Windows Update from the workspace.
- B. Instruct the employee to connect to the company network from the workspace by using VPN.
- C. Instruct the employee to run the `slmgr /upk` command from the workspace.
- D. Give the employee a Multiple Activation Key (MAK).

Correct Answer: B

Explanation: http://technet.microsoft.com/en-us/library/jj592680.aspx#wtg_faq_roamact Windows To Go: Frequently Asked Questions

Do I need to activate Windows To Go every time I roam?

No, Windows To Go requires volume activation; either using the Key Management Service (KMS) server in your organization or using Active Directory based volume activation. The Windows To Go workspace will not need to be reactivated

every time you roam. KMS activates Windows on a local network, eliminating the need for individual computers to connect to Microsoft. To remain activated, KMS client computers must renew their activation by connecting to the KMS host on

periodic basis. This typically occurs as soon as the user has access to the corporate network (either through a direct connection on- premises or a through remote connection using DirectAccess or a virtual private network connection), once

activated the machine will not need to be activated again until the activation validity interval has passed. In a KMS configuration the activation validity interval is 180 days.

Further Information: <http://technet.microsoft.com/en-us/library/dn502540.aspx> Slmgr.vbs Options for Volume Activation

Table 2. Slmgr.vbs command-line options

`/upk [ActivationID]`

This option uninstalls the product key of the current Windows edition. After a restart, the system will be in an Unlicensed state unless a new product key is installed. Optionally, you can use the [Activation ID] parameter to specify a different

installed product. This operation must be run from an elevated command prompt.

QUESTION 3

A company has Windows 8.1 client computers. The company uses Windows BitLocker Drive Encryption and BitLocker Network Unlock on all client computers.

You need to collect information about BitLocker Network Unlock status.

Which command should you run?

- A. Run the BdeHdCfg command.
- B. Run the bitsadmin command.
- C. Run the BitLockerWizard command.
- D. Run the manage-bde command.

Correct Answer: D

QUESTION 4

You are a system administrator for your company.

The company has satellite offices located within different regions around the world and does not want employees to rely on carrying computers around when they visit the satellite offices. The company is deploying Windows To Go as a solution.

You need to ensure that the company has the proper configuration for Windows To Go before deploying the solution. Which configuration should you use?

- A. At least one USB 2.0 port on the host PC
- B. A second partition to run Windows To Go with a minimum of a DVD-RW to write Windows To Go data
- C. An ISO image of the computer on a DVD-RW
- D. A USB 1.0 device certified for use for Windows To Go

Correct Answer: A

QUESTION 5

You are a consultant traveling out of town. You are carrying a Windows 8.1 Pro laptop that you use for giving presentations while connected to a projector.

You are concerned about battery life while presenting and need to modify your power settings to maximize battery life without risking interrupting your presentation.

Which two settings do you need to configure to increase battery life without risking interruption to your presentation? (To answer, select the appropriate two settings from the Power Options window in the answer area.)
