QUESTION 1

Your company has a main office and two branch offices named Branch1 and Branch2. The main office contains a file server named Server1 that has BranchCache enabled. Branch1 contains a server named Server2 that is configured as a

hosted cache server.

All client computers run Windows 8.1 Enterprise. All of the computers are joined to an Active Directory domain.

The BranchCache settings of all the computers are configured as shown in the following exhibit. (Click the Exhibit button.)

Policy	Setting	Comment
Enable Automatic Hosted Cache	Enabled	
Discovery by Service Connection Point	Enabled	
Set BranchCache Distributed Cache mode	Enabled	
Set percentage of disk space used for client computer cache	Enabled	
Specify the percentage of total disk space allocated for the cache		
	5	
Turn on BranchCache	Enabled	

In the table below, identify the effective setting for the client computers in each branch office. Make one selection in each column. Each correct selection is worth one point.

Hot Area:

Effective setting	Branch1 Computers	Branch2 Computers
Will not use BranchCache.	<input type="checkbox"/>	<input type="checkbox"/>
Will retrieve cached content from peers.	<input type="checkbox"/>	<input type="checkbox"/>
Will retrieve cached content from Server1.	<input type="checkbox"/>	<input type="checkbox"/>
Will retrieve cached content from Server2.	<input type="checkbox"/>	<input type="checkbox"/>

Correct Answer:

Effective setting	Branch1 Computers	Branch2 Computers
Will not use BranchCache.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Will retrieve cached content from peers.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Will retrieve cached content from Server1.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Will retrieve cached content from Server2.	<input checked="" type="checkbox"/>	<input type="checkbox"/>

QUESTION 2

You administer computers that run Windows 7 and Windows 8. You run an application that saves files that contain local settings unique to each user.

You want to allow users to synchronize settings for an application to any enterprise computer when they log on to the enterprise computer.

You need to implement a solution that will move a user's settings files to any computer.

You also need to ensure that you can roll back the changes if necessary.

Which required task or tasks should you perform with each approach? (To answer, drag the appropriate required task to the corresponding approach. Each required task may be used once, more than once, or not at all. You may need to drag

the split bar between

panes or scroll to view content.)

Select and Place:

Required Task	Approach
Create a settings location template.	Generator
Place the settings location template.	Template Catalog Path
Enable Folder Redirection.	Microsoft Desktop Optimization Pack (MDOP)
Deploy the User Experience Virtualization (UE-V) Agent.	

Correct Answer:

Required Task	Approach
	Generator
	Template Catalog Path
Enable Folder Redirection.	Microsoft Desktop Optimization Pack (MDOP)

Create a settings location template.

Place the settings location template.

Deploy the User Experience Virtualization (UE-V) Agent.

QUESTION 3

A company has Windows 8.1 client computers. The company develops a Windows Store app but does not publish it to the Windows Store.

You need to sideload the Windows Store app on all client computers.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Run the get-appxpackage Windows PowerShell cmdlet.
- B. Run the add-appxpackage Windows PowerShell cmdlet.
- C. Enable the Allow all trusted applications to install Group Policy setting.
- D. Enable the Allow installation of desktop items Group Policy setting.
- E. Run the msixexec command.

Correct Answer: BC

<http://technet.microsoft.com/en-us/library/hh856048.aspx> Add-AppxPackage

The Add-AppxPackage cmdlet adds a signed app package (.appx) to a user account. Use the DependencyPath parameter to add all other packages that are required for the installation of the app package.

You can use the Register parameter to install from a folder of unpackaged files during development of Windows Store apps.

To update an already installed package, the new package must have the same package family name.

<http://technet.microsoft.com/en-US/windows/jj874388.aspx> Try It Out: Sideload Windows Store Apps

By now, you are familiar with Windows Store apps. There are some pretty cool ones available in the store, and publishers are adding more every week. A great thing about Windows Store apps is they are super simple to install (and uninstall).

But what about line of business (LOB) apps? You probably do not want to publish them through the Windows Store since that would make them publically available. Instead, you can sideload LOB apps. Sideload simply means installing a

Windows Store app without publishing it in and downloading it from the store. You install it directly.

Verify the Requirements

There are a small number of requirements computers must meet to sideload Windows Store apps on them. We will start with computers running Windows 8 Enterprise:

The computer running Windows 8 Enterprise must be joined to the domain. You must enable the "Allow all trusted apps to install" Group Policy setting. The app must be signed by a \ certificate that is chained to a trusted root certificate.

Further Information:

<http://technet.microsoft.com/en-us/library/hh856044.aspx> Get-AppxPackage

The Get-AppxPackage cmdlet gets a list of the app packages (.appx) that are installed in a user profile.

To get the list of packages for a user profile other than the profile for the current user, you must run this command by using administrator permissions. [http:// www.advancedinstaller.com/user-guide/msiexec.html](http://www.advancedinstaller.com/user-guide/msiexec.html) Msiexec.exe Command Line

The Windows Installer technology uses Msiexec.exe for installing MSI and MSP packages.

QUESTION 4

You update the video card driver on a computer that runs Windows 8.1.

You can no longer configure the display settings to extend the display to a projector.

You need to restore the display options as quickly as possible and retain all user data.

What should you do?

- A. Run the DisplaySwitch /extend command.
- B. Roll back the video card driver to the previous version.
- C. Start the computer from the Windows 8 installation media and perform a system image recovery.
- D. Run the sfc /scannow command.

Correct Answer: B

Rolling back the driver is the simplest and fastest solution.

C:\Users\Chaudhry\Desktop\1.jpg

C:\Users\Chaudhry\Desktop\1.jpg

Further Information:

The DisplaySwitch /extend command might not work if the driver is broken. The sfc /scannow command checks system files for consistency. And a system image recovery will affect the user data.

QUESTION 5

You are the PC Support Specialist for Contoso, Ltd. You are configuring Windows 8.1 so that you can create an image. An additional web browser is installed on the image.

You need to ensure that Internet Explorer 11 for the Desktop is the default web browser.

Which two actions should you perform? (Each correct answer presents a complete solution. Choose two.)

- A. Go to Programs and Features in Control Panel and set Internet Explorer as the default application.
- B. Tap the tile of another web browser on the Start Menu and tap the Unpin from start option.
- C. Under Set program access and computer defaults, select Default Programs, then choose Microsoft Windows.
- D. On the Security tab of Internet options, click Reset all zones to default level.
- E. In Default Programs, associate the .htm and .html files with Internet Explorer.

Correct Answer: CE
