QUESTION 1

You support Windows 10 Enterprise desktop computers. Your company has a security policy that controls multiple settings of the desktop through the domain group policy.

The security policy recently was updated to require that access to several built-in Windows 10 Enterprise tools be prohibited to all local users on one of the desktop computers.

You need to implement this new policy.

What should you do?

- A. Configure an AppLocker policy.
- B. Create a Windows To Go workspace.
- C. Configure NTFS permissions.
- D. Enable BitLocker.

Correct Answer: A

QUESTION 2

You have a Windows 10 Enterprise computer that has File History enabled. You create a folder named Data in the root of the C: drive.

You need to ensure that Data is protected by File History.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

- A. From File Explorer, include Data in an existing library.
- B. Modify the Advanced settings from the File History Control Panel item.
- C. From File Explorer, create a new library that contains Data
- D. From File Explorer, modify the system attribute of Data.

Correct Answer: AC

QUESTION 3

You administer Windows 10 Enterprise computers. Your company has a team of technical writers that is preparing technical manuals and help files. The team manager wants to ensure that the technical writers are able to restore any

documents that been modified within the last year.

You need to ensure that the technical writers can restore Microsoft Word files to any previous versions for up to one year.

Which three actions should you perform in sequence?

Select and Place:

Actions	Answers
Create a network share, configure NTFS, and then share permissions.	
Turn on System Protection and create a restore point.	
Turn on File History.	
Configure the Keep Saved Versions setting	

Correct Answer:

Actions	Answers
	Create a network share, configure NTFS, and then share permissions.
Turn on System Protection and create a restore point.	Configure the Keep Saved Versions setting
	Turn on File History.

QUESTION 4

You administer a Windows 10 Enterprise computer that runs Hyper-V. The computer hosts a virtual machine with multiple snapshots. The virtual machine uses one virtual CPU and 512 MB of RAM.

You discover that the virtual machine pauses automatically and displays the state as paused-critical.

You need to identify the component that is causing the error.

Which component should you identify?

- A. no virtual switch defined
- B. insufficient memory
- C. insufficient hard disk space
- D. insufficient number of virtual processors

Correct Answer: C

In this question, the VM has "multiple snapshots" which would use up a lot of disk space. Virtual machines will go into the "Paused-Critical" state in Hyper-V if the free space on the drive that contains the snapshots goes below 200MB. One thing that often trips people up is if they have their virtual hard disks configured on one drive ?but have left their snapshot files stored on the system drive. Once a virtual machine snapshot has been taken?the base virtual hard disk stops expanding and the snapshot file stores new data that is written to the disk ?so it is critical that there is enough space in the snapshot storage location.

QUESTION 5

All computers are connected to Homegroup. User wants to share a printer.

The printer function for the computer it is attached to.

You verify that printers are enabled under homegroup settings, but the printer does not appear on the network.

The user is able to share documents and access other shared printers in the Homegroup.

You need to allow other users to use the printer.

What should you do?

- A. Enable sharing under the printer properties
- B. Map the printer on the client computers
- C. Update the printer driver to a version that supports homegroup sharing
- D. Disable and reenable the sharing of printers under homegroup on the computer

Correct Answer: A
