QUESTION 1

You have a portable Windows 10 Enterprise computer.

You are creating a backup plan. You have the following requirements:

Automatically back up the files in your Documents folder every hour.

Ensure that you can recover different versions of the backed-up files.

Do not back up the Windows operating system files.

You need to configure the computer to meet the requirements.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Connect an external hard drive to the computer.
- B. Turn on File History.
- C. Create a volume mount point in your Documents folder.
- D. Schedule a task to create a restore point every hour.
- E. Create a recovery drive on drive C.

Correct Answer: AB

QUESTION 2

You deploy several tablet PCs that run Windows 10 Enterprise.

You need to minimize power usage when the user presses the sleep button.

What should you do?

- A. In Power Options, configure the sleep button setting to Sleep.
- B. In Power Options, configure the sleep button setting to Hibernate.
- C. Configure the active power plan to set the system cooling policy to passive.
- D. Disable the C-State control in the computer's BIOS.

Correct Answer: B

We can minimize power usage on the tablet PCs by configuring them to use Hibernation mode. A computer in hibernation mode uses no power at all. Hibernation is a power-saving state designed primarily for laptops. While sleep puts your work and settings in memory and draws a small amount of power, hibernation puts your open documents and programs on your hard disk, and then turns off your computer. Of all the power-saving states in Windows, hibernation uses the least amount of power. On a laptop, use hibernation when you know that you won't use your laptop for an

extended period and won't have an opportunity to charge the battery during that time.

QUESTION 3

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have a computer that runs Windows 10 and is used by 10 users. The computer is joined to an Active Directory domain. Each user has an Active Directory account.

You need to ensure that all of the users can access the files located in one another's libraries. What should you configure?

- A. Microsoft OneDrive
- B. HomeGroup settings
- C. Encrypting File System (EFS) settings
- D. NTFS permissions
- E. Account policies
- F. Share permissions
- G. Software restriction policies
- H. Application control policies

Correct Answer: D

QUESTION 4

You have two Windows 10 Enterprise computers named COMPUTER1 and COMPUTER2.

You connect from COMPUTER1 to COMPUTER2 by using Remote Desktop. You are unable to copy any files between COMPUTER1 and COMPUTER2 during the Remote Desktop session.

You need to ensure that you can copy files between the computers during the Remote Desktop session.

What should you do?

- A. On COMPUTER2, open Remote Desktop Connection and configure the Local devices and resources settings.
- B. On COMPUTER1, open Remote Desktop Connection and configure the Local devices and resources settings.
- C. On COMPUTER1, add COMPUTER2 to the trusted hosts in Windows Remote Management (WinRM).

D. On COMPUTER2, add COMPUTER1 to the trusted hosts in Windows Remote Management (WinRM).

Correct Answer: B

QUESTION 5

You have a Windows 10 Enterprise computer.

The computer has a shared folder named C:\Marketing. The shared folder is on an NTFS volume.

The current NTFS and share permissions are configured as follows.

| Group name | NTFS permission | Shared folder permission |
|------------|------------------|--------------------------|
| Everyone | Read and Execute | Read |
| Marketing | Modify | Full Control |

UserA is a member of both the Everyone group and the Marketing group. UserA must access C:\Marketing from across the network. You need to identify the effective permissions of UserA to the C:\Marketing folder. What permission should you identify?

- A. Full Control
- B. Read and Execute
- C. Read
- D. Modify

Correct Answer: D

UserA is a member of both the Everyone group and the Marketing group and UserA must access C:\Marketing from across the network. When accessing a file locally, you combine the NTFS permissions granted to your account either directly or by way of group membership. The 'least\' restrictive permission is then the permission that applies. In this question, the NTFS permission is the least restrictive of Read/Execute and Modify... so Modify is the effective permission. When accessing a folder or file across the network, you combine the effective NTFS permissions (Modify in this case) with the effective Share permissions granted to your account either directly or by way of group membership (Full Control in this case). The 'most\' restrictive permission is then the permission that applies. Modify is more restrictive than Full Control so Modify is the effective permission.
