QUESTION 1

You use System Center Configuration Manager (Current Branch) to manage client computers that run Windows 7. You have a Microsoft Application Virtualization (App-V) package named App1.

You need to deploy App1 to the computers by using Configuration Manager and ensure that the App1 runs.

What should you do first?

- A. Install the App-V Sequencer on a reference computer.
- B. From the Configuration Manager console, create an App-V virtual environment.
- C. Deploy the App-V client to the computers.
- D. Configure the Enable App-V Client setting by using a Group Policy object (GPO).

Correct Answer: D

QUESTION 2

You have a deployment of System Center Configuration Manager (Current Branch).

You deploy several Microsoft Store for Business apps to client computers by using Configuration Manager.

You purchase a new Microsoft Store for Business app named App1. App1 is licensed for offline use.

You need to ensure that you can deploy App1 immediately by using Configuration Manager.

What should you do?

- A. From the Configuration Manager console, synchronize the Windows Store for Business.
- B. From the Microsoft Azure portal, add App1 to Azure Active Directory.
- C. From the Configuration Manager console, run the Azure Services Wizard.
- D. From Microsoft Intune in the Microsoft Azure portal, add App1 to Intune.

Correct Answer: A

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You deploy the first primary site server to your organization. Discovery is not configured.

You need to deploy the Configuration Manager client to five client computers in a workgroup.

Solution: You deploy the client by using a software deployment.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

References: <https://docs.microsoft.com/en-us/sccm/core/clients/deploy/deploy-clients-to-windows-computers>

QUESTION 4

Your company has offices in New York and London.

All client computers run Windows 10.

You have a deployment of System Center Configuration Manager (Current Branch) that you use to manage the computers.

The company has the applications shown in the following table.

Application name	Description
App1	Installed by using an Windows Installer (MSI) package
App2	Installed by using an Windows Installer (MSI) package and is dependent on App1
App3	Installed by using an executable file named Setup.exe

You need to deploy the applications to meet the following requirements:

Deploy App2 to all the computers in the New York office.

Deploy App3 to all the computers in the London office.

Minimize administrative effort.

What should you create in Configuration Manager for each deployment? To answer, drag the appropriate options to the correct applications. Each option may be used once, more than once, or not at all. You may need to drag the split bar

between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Options

- an application
- a deployment package
- a package
- a software update group

Answer Area

App2: Option

App3: Option

Correct Answer:

Options

- a deployment package
- a software update group

Answer Area

App2: an application

App3: a package

QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You configure a cloud management gateway for Configuration Manager.

You have a client computer that is currently on the corporate network.

You need to force the computer to get the location of the cloud management gateway immediately.

Solution: You restart the SMS Agent Host service.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A
