### QUESTION 1

You have two Hyper V hosts named Server1 and Server2 that run Windows Server 2012 R2. The servers are nodes in a failover cluster named Cluster1.

You perform a rolling upgrade of the cluster nodes to Windows Server 2016.

You need to ensure that you can implement the Virtual Machine Load Balancing feature. Which cmdlet should you use?

- A. Update-ClusterNetWorkNameResource
- B. Set-GusterGroupSet
- C. Update-ClusterFunctionalLevel
- D. Set-CauClosterRole

Correct Answer: C

<https://docs.microsoft.com/en-us/windows-server/failover-clustering/cluster-operating-system-rollingupgrade#cluster-os-rolling-upgrade-process>

### QUESTION 2

You have a server named Server1 that runs Windows Server 2016 Server1 has the Web Application Proxy role service installed

You publish an application named App1 by using the Web Application Proxy.

You need to change the URL that users use to connect to App1 when they work remotely.

Which command should you run? To answer, select the appropriate options in the answer area

Hot Area:

<input checked="" type="checkbox"/>	-ID 874A4543-7983-77A3-1E6D-1163E7419AC1
Set-WebApplicationProxySslCertificate	
Set- WebApplicationProxyApplication	
Set- WebApplicationProxyConfiguration	

<input checked="" type="checkbox"/>	https://SP.Contoso.com
-ADFSUrl	
-BackendServerURL	
-ExternalURL	

Correct Answer:

	<input checked="" type="checkbox"/>
Set-WebApplicationProxySslCertificate	
Set-WebApplicationProxyApplication	
Set-WebApplicationProxyConfiguration	

-ID 874A4543-7983-77A3-1E6D-1163E7419AC1

	<input checked="" type="checkbox"/>
-ADFSUrl	
-BackendServerURL	
-ExternalURL	

https://SP.Contoso.com

### QUESTION 3

You have a server named Server1 that runs Windows Server 2016.

You need to configure Server1 as a Web Application Proxy.

Which server role or role service should you install on Server1?

- A. Web Server (IIS)
- B. Network Policy and Access Services
- C. Direct Access and VPN (RAS)
- D. Active Directory Federation Services
- E. Remote Access

Correct Answer: E

### QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a server named Server1 that runs Windows Server 2016. Server1 hosts a line-of-business application named App1. App1 has a memory leak that occasionally causes the application to consume an excessive amount of memory.

You need to log an event in the Application event log whenever App1 consumes more than 4 GB of memory.

Solution: You create a performance counter alert data collector.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

---

## QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have two servers that run Windows Server 2016.

You plan to create a Network load Balancing (NLB) cluster that will contain both servers.

You need to configure the network cards on the servers for the planned NLB configuration.

Solution: You configure the network cards to be on the same subnet and to have dynamic IP addresses. You configure the cluster to use multicast.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Following are the hardware requirements to run an NLB cluster.

All hosts in the cluster must reside on the same subnet.

There is no restriction on the number of network adapters on each host, and different hosts can have a different number of adapters.

Within each cluster, all network adapters must be either multicast or unicast. NLB does not support a mixed environment of multicast and unicast within a single cluster.

If you use the unicast mode, the network adapter that is used to handle client-to-cluster traffic must support changing its media access control (MAC) address.

Following are the software requirements to run an NLB cluster.

Only TCP/IP can be used on the adapter for which NLB is enabled on each host. Do not add any other protocols (for example, IPX) to this adapter.

The IP addresses of the servers in the cluster must be static.
