### QUESTION 1

The DNS Server service provides several types of zones. Which zone helps to keep delegated zone information current, improve name resolution and simplify DNS administration, but is not an alternative for enhancing redundancy and load sharing?

- A. secondary
- B. stub
- C. none of these
- D. primary

Correct Answer: B

When a zone that this DNS server hosts is a stub zone, this DNS server is a source only for information about the authoritative name servers for this zone. The zone at this server must be obtained from another DNS server that hosts the

zone. This DNS server must have network access to the remote DNS server to copy the authoritative name server information about the zone.

When a DNS server loads a stub zone, such as `widgets.thetoycompany.com`, it queries the master servers, which can be in different locations, for the necessary resource records of the authoritative servers for the zone

`widgets.thetoycompany.com`. The list of master servers may contain a single server or multiple servers, and it can be changed anytime.

---

### QUESTION 2

You have an Active Directory forest that contains 30 servers and 6,000 client computers. You deploy a new DHCP server that runs Windows Server 2016. You need to retrieve the list of the authorized DHCP servers.

Which command should you run?

- A. `Get-ADResourceProperty-Filter DHCP`
- B. `Netsh DHCP show server`
- C. `Netsh DHCP server initiate auth`
- D. `Get-DHCPServerSetting`
- E. `Netstat -p IP -s -a`

Correct Answer: B

### QUESTION 3

On a DNS server that runs Windows Server 2016, you plan to create two new primary zones named adatum.com and contoso.com. You have the following requirements for the zones:

Ensure that computers on your network can register records automatically in the adatum.com zone.

Ensure that records that are stale for two weeks are purged automatically from the contoso.com zone.

What command should you run? To answer, select the appropriate options in the answer area.

Hot Area:

|                        |
|------------------------|
| ▼                      |
| Set-DnsServer          |
| Set-DnsServerForwarder |
| Set-DnsServerRootHint  |
| Suspend-DnsServerZone  |

|                                 |
|---------------------------------|
| ▼                               |
| -IPAddress 10.0.010             |
| -Name "." -PassThru             |
| -NameServer server2.contoso.com |
| -UseRootHint\$false             |

Correct Answer:

|                        |
|------------------------|
| ▼                      |
| Set-DnsServer          |
| Set-DnsServerForwarder |
| Set-DnsServerRootHint  |
| Suspend-DnsServerZone  |

|                                 |
|---------------------------------|
| ▼                               |
| -IPAddress 10.0.010             |
| -Name "." -PassThru             |
| -NameServer server2.contoso.com |
| -UseRootHint\$false             |

#### QUESTION 4

You have a server named Server1 that runs Windows Server 2016 and is configured as a domain controller.

You install the DNS Server server role on Server1.

You plan to store a DNS zone in a custom Active Directory partition.

You need to create a new Active Directory partition for the zone.

What should you use?

- A. Set-DnsServer
- B. Active Directory Sites and Services
- C. Dns.exe
- D. Dnscmd.exe

Correct Answer: D

[https://technet.microsoft.com/en-us/library/ee649181\(v=ws.10\).aspx](https://technet.microsoft.com/en-us/library/ee649181(v=ws.10).aspx)

---

#### QUESTION 5

You have a server named Server1 that connects directly to multiple networks.

You need to configure Server1 as a BGP router.

What should you install on Server1?

- A. the MultiPoint Services server role
- B. the Network Policy and Access Services server role
- C. the Network Controller server role
- D. the Routing role service

Correct Answer: D
