QUESTION 1

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1.

Server1 configured to use a forwarder named server2.contoso.com that has an IP address of 10.0.0.10.

You need to prevent Server1 from using root hints if the forwarder is unavailable.

What command should you run? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Suspend-DnsServerZone	-Name *.* -PassThru
Se:-DnsServer	IPAddress 10.0.0.10
Se:-DnsServerForwarder	-NameServer server2.contoso.com
Se:-DnsServerRootHint	-UseRootHints. \$false

Correct Answer:

Answer Area

Suspend-DnsServerZone	-Name *.* -PassThru
Se:-DnsServer	IPAddress 10.0.0.10
Se:-DnsServerForwarder	-NameServer server2.contoso.com
Se:-DnsServerRootHint	-UseRootHints. \$false

-UseRootHint Specifies whether to prevent the DNS server from performing iterative queries. If you set UseRootHint to \$false, the DNS server forwards unresolved queries only to the DNS servers in the forwarders list and does not try iterative queries if the forwarders do not resolve the queries. References: <https://docs.microsoft.com/en-us/powershell/module/dnsserver/set-dnsserverforwarder?view=win10-ps>

QUESTION 2

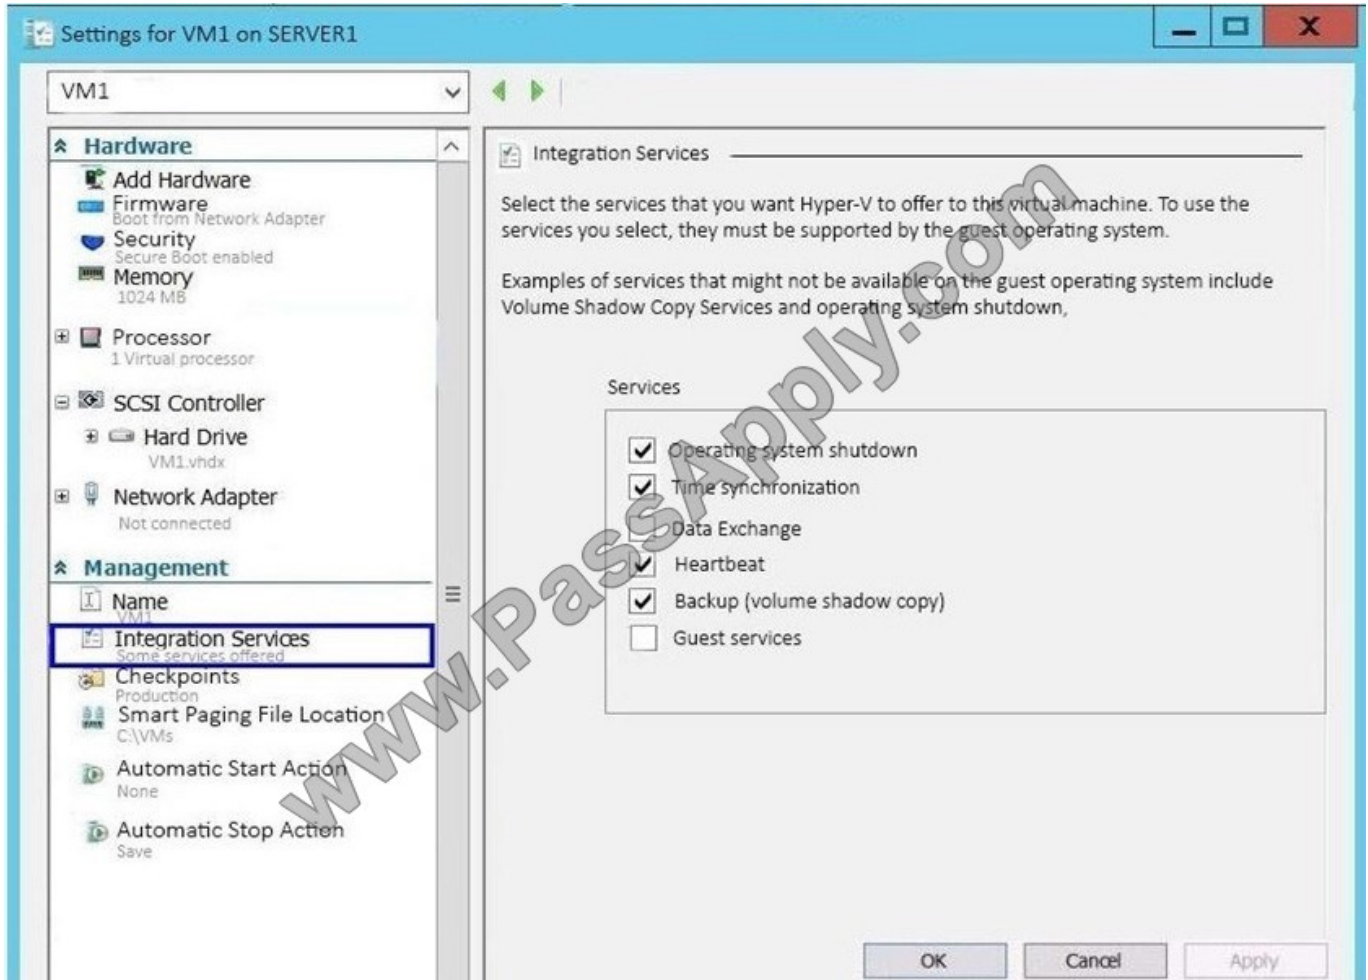

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some questions sets might have more than one correct solutions,

while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Hyper-V host named Server1 that hosts a virtual machine named VM1. Server1 and VM1 run Windows Server 2016. The settings for VM1 are configured as shown in the exhibit below:

You need to ensure that you can use the Copy-VMFile cmdlet on Server1 to copy files from VM1.

Solution: You start the Hyper-V Guest Service Interface service on VM1

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

Guest Services:

This is a new Integration Services component introduced in Windows Server 2012 R2 that is disabled by default.

Guest Services enables the copying of files to a virtual machine using WMI APIs or using the new Copy-VMFile PowerShell cmdlet

QUESTION 3

You have a DirectAccess Server that is accessible by using the name `directaccess.fabrikam.com`. On the DirectAccess server, you install a new server certificate that has a subject name of `directaccess.contoso.com`, and then you configure DNS records for `directaccess.contoso.com`. You need to change the endpoint name for DirectAccess to `directaccess.contoso.com`. What command should you run? To answer, select the appropriate options in the answer area.

Hot Area:

Correct Answer:

QUESTION 4

You deploy a Hyper-V server named `Server1` in an isolated test environment. The test environment is prevented from accessing the Internet. `Server1` runs the Datacenter edition of Windows Server 2016. You plan to deploy the following guest virtual machines on the server:

Quantity	Operating system	Domain member
10	Windows Server 2012 R2	Yes
4	Windows Server 2016	No
5	Windows Server 2016	Yes

Which activation model should you use for the virtual machines?

- A. Multiple Activation Key (MAK)
- B. Key Management Service (KMS)
- C. Original Equipment Manufacturer (OEM) key
- D. Automatic Virtual Machine Activation (AVMA)

Correct Answer: D

On virtualization servers that are activated using Volume Licensing or OEM licensing, AVMA offers several benefits. Server datacenter managers can use AVMA to do the following:

*

Activate virtual machines in remote locations

*

Activate virtual machines with or without an internet connection

*

Track virtual machine usage and licenses from the virtualization server, without requiring any access rights on the virtualized systems Note: AVMA requires a Microsoft Virtualization Server running Windows Server 2012 R2 Datacenter or Windows Server 2016 Datacenter.

QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some questions sets might have more than one correct solutions,

while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest named contoso.com. The forest has three sites located in London, Paris and Berlin. The London site contains a web server named Web1 that runs Windows Server 2016.

You need to configure Web1 as an HTTP content server for the hosted cache servers located in the Paris and Berlin sites.

Solution: You install the BranchCache feature, and then you start the BranchCache service.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A
