QUESTION 1

You are implementing a new network. The network contains a DHCP server named DHCP1 that runs Windows Server 2016. DHCP1 contains a scope named Scope1 for the 192.168.0/24 subnet.

Your company has the following policy for allocating IP addresses:

All server addresses must be excluded from DHCP scopes.

All client computer must receive IP addresses from Scope1.

All Windows servers must have IP addresses in the range of 192.168.0.200 to 1 92.168.0.240

All other network devices must have IP addresses in the range of 192.168.0.180 to 1 92.168.0.199.

You deploy a print device named Print1.

You need to ensure that Print1 adheres to the policy for allocating IP addresses.

Which command should you use?

- A. Add-DhcpServerv4Lease
- B. Add-DhcpServerv4ExclusionRange
- C. Add-DhcpServerv4Filter
- D. Add-DhcpServerv4Reservation

Correct Answer: B

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some questions sets might have more than one correct solutions,

while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest named contoso.com. The forest has three sites located in London, Paris and Berlin.

The London site contains a web server named Web1 that runs Windows Server 2016. You need to configure Web1 as an HTTP content server for the hosted cache servers located in the Paris and Berlin sites.

Solution: You install the DFS Replication role service, and then you start the Network Connections service.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

QUESTION 3

Your network contains an Active Directory domain. The domain contains two Hyper-V hosts.

You plan to perform live migrations between the hosts.

You need to ensure that the live migration traffic is authenticated by using Kerberos.

What should you do first?

A. From Server Manager, install the Host Guardian Service server role on a domain controller.

B. From Active Directory Users and Computers, add the computer accounts for both servers to the Cryptographic Operators group.

C. From Active Directory Users and Computers, modify the Delegation properties of the computer accounts for both servers.

D. From Server Manager, install the Host Guardian Service server role on both servers.

Correct Answer: C

If you have decided to use Kerberos to authenticate live migration traffic, configure constrained delegation before you proceed to the rest of the steps.

To configure constrained delegation

Open the Active Directory Users and Computers snap-in.

From the navigation pane, select the domain and double-click the Computers folder.

From the Computers folder, right-click the computer account of the source server and then click Properties.

In the Properties dialog box, click the Delegation tab.

On the delegation tab, select Trust this computer for delegation to the specified services only. Under that option, select Use Kerberos only.

QUESTION 4

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10. On Server1, you have the following zone configuration

ZoneName	ZoneType	IsAutoCreated	IsDsIntegrated	IsReverseLookupZone	IsSigned
_msdcs.contoso.com	Primary	False	True	False	False
adatum.com	Forwarder	False	False	False	False
contoso.com	Primary	False	True	False	False
fabrikam.com	Primary	False	False	False	True
TrustAnchors	Primary	False	True	False	False

You have the following subnets defined on Server1.

Name	IPV4Subnet	IPV6Subnet
Subnet1	(10.0.0.0/24)	
Subnet2	(10.0.1.0/24)	
Subnet3	(192.168.15.0/24)	
Subnet4	(172.16.1.0/24)	

You need to prevent Server1 from resolving queries from DNS clients located on Subnet4.

Server1 must resolve queries from all other DNS clients.

Solution: From Windows PowerShell on Server1, you run the Export-DnsServerDnsSecPublicKey cmdlet.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

Example: Export a trust anchor to a file share

This command exports the trust anchor (DS record) for Contoso.com to a file share. A DNS administrator runs this command from the DNS server that hosts the zone Contoso.com and specifies that the zone signing key uses the SHA-1

algorithm to create the DS record.

```
PS C:\> Export-DnsServerDnsSecPublicKey -ComputerName "DNSDC1.Contoso.com" -ZoneName "Contoso.com" -Path "\\MyDNSKeyShare\keys" -PassThru -DigestType "Sha1"
```

QUESTION 5

Your company has 10 offices. Each office has a local network that contains several Hyper-V hosts that run Windows Server 2016. All of the offices are connected by high speed, low latency WAN links.

You need to ensure that you can use QoS policies for Live Migration traffic between the offices.

Which component should you install?

- A. the Canary Network Diagnostics feature
- B. the Network Controller server role

- C. the Data Center Bridging feature
- D. the Multipath I/O feature
- E. the Routing role service

Correct Answer: C

NICs with a standard NIC team and two RDMA NICs

This configuration emphasizes the use of RDMA. To converge other workloads such as Live Migration, Cluster and Management on the same RDMA NICs, the NICs must also support Data Center Bridging (DCB). To provide high availability

to Storage, you can enable Microsoft Multipath I/O (MPIO).

With this configuration, you can apply all QoS features, including Bandwidth Management, Classification and Tagging, and PFC in the management operating system.
