QUESTION 1

You are installing the Data Quality Server component of Data Quality Services.

You need to provision the hardware and install the software for the server that runs the Data Quality Server.

You must ensure that the minimum Data Quality Server prerequisites are met.

What should you do?

- A. Install SQL Server 2016 Database Engine.
- B. Install Microsoft SharePoint Server 2010 Enterprise Edition with PowerPivot.
- C. Make sure the server has at least 4 GB of RAM.
- D. Install Microsoft Internet Explorer 6.0 SP1 or later.

Correct Answer: A

Explanation: Data Quality Server Minimum System Requirements

*

SQL Server 2016 Database Engine.

*

Memory (RAM): Minimum: 2 GB Recommended: 4 GB or more

Note: SQL Server Data Quality Services (DQS) is a new feature in SQL Server 2016 that contains the following two components: Data Quality Server and Data Quality Client.

QUESTION 2

You need to recommend a storage solution for a data warehouse that minimizes load times. The solution must provide availability if a hard disk fails.

Which RAID configuration should you recommend for each type of database file? To answer, drag the appropriate RAID configurations to the correct database file types. Each RAID configuration may be used once, more than once, or not at

all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

RAID Configuration		Answer Area	
RAID 0	RAID 5	Data file:	RAID configuration
RAID 6	RAID 10	Transaction log:	RAID configuration

Correct Answer:

RAID Configuration		Answer Area	
RAID 0		Data file:	RAID 5
RAID 6		Transaction log:	RAID 10

QUESTION 3

You manage a SQL Server Master Data Services (MDS) environment.

A new application requires access to the product data that is available in the MDS repository.

You need to design a solution that gives the application access to the product data with the least amount of development effort.

What should you do?

- A. Use sp_addlinkedserver to add a linked server to access the MDS database tables directly.
- B. Create an OLE DB connection string that sets the Provider property to MDS.
- C. Use transactional replication for data synchronization.
- D. Create a Subscription View in MDS.

Correct Answer: D

QUESTION 4

You are developing a Microsoft SQL Server Master Data Services (MDS) solution.

The model contains an entity named Product. The Product entity has three user-defined attributes named Category, Subcategory, and Price, respectively.

You need to ensure that combinations of values stored in the Category and Subcategory attributes are unique.

What should you do?

- A. Create an attribute group that consists of the Category and Subcategory attributes. Create a custom index for the attribute group.
- B. Publish a business rule that will be used by the Product entity.
- C. Create a derived hierarchy based on the Category and Subcategory attributes. Use the Category attribute as the top level for the hierarchy.
- D. Create an attribute group that consists of the Category and Subcategory attributes. Publish a business rule for the attribute group.

Correct Answer: D

In Master Data Services, business rule actions are the consequence of business rule condition evaluations. If a condition is true, the action is initiated.

The Validation action "must be unique": The selected attribute must be unique independently or in combination with defined attributes.

Incorrect Answers:

A: In Master Data Services, attribute groups help organize attributes in an entity. When an entity has lots of attributes, attribute groups improve the way an entity is displayed in the Master Data Manager web application.

C: A Master Data Services derived hierarchy is derived from the domain-based attribute relationships that already exist between entities in a model.

QUESTION 5

You are loading a dataset into SQL Server. The dataset contains numerous duplicates for the Artist and Song columns.

The values in the Artist column in the dataset must exactly match the values in the Artist domain in the knowledge base. The values in the Song column in the dataset can be a close match with the values in the Song domain.

You need to use SQL Server Data Quality Services (DQS) to define a matching policy rule to identify duplicates.

How should you configure the Rule Editor? (To answer, drag the appropriate answers to the answer area.)

Select and Place:

0

50

100

Prerequisite Choices

No

Yes

Rule Editor Show overlapping clusters

Domain	Similarity	Weight	Prerequisite
Artist	Similar		
Song	Similar		

Correct Answer:

50

Prerequisite Choices

Rule Editor Show overlapping clusters

Domain	Similarity	Weight	Prerequisite
Artist	Similar	0	Yes
Song	Similar	100	No
