QUESTION 1

You have a Microsoft SQL Server instance that has R Services (In-Database) installed. The server has a comma-separated values (CSV) file stored in the local file system.

For analytic purposes, you need to read the CSV file into a database table in the SQL Server instance.

You connect to the SQL Server instance by using SQL Server Management Studio.

What should you use from sp_execute_external_script?

A. RxSqlServerData and specify the CSV file path in the connection string

B. rxDataStep and specify the CSV file path as the inFile argument

C. rxImportToXdf and specify specify the CSV file as the input

D. read.csv and specify the CSV file path as the parameter

Correct Answer: D

QUESTION 2

You plan to analyze data on a local computer. To improve performance, you plan to alternate the operation between a Microsoft SQL Server and the local computer.

You need to run complex code on the SQL Server, and then revert to the local compute context.

Which R code segment should you use?

A. sqlCompute
