QUESTION 1

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario

You are developing a Microsoft R Open solution that will leverage the computing power of the database server for some of your datasets.

You are performing feature engineering and data preparation for the datasets.

The following is a sample of the dataset.

```
rxGetInfo(df)
head(df)

  age incwage perwt  wkswork1  state
1  50    9000    30      48    Indiana
2  41   35000    20      48    Indiana
3  55   40400    21      52    Indiana
4  56   45000    30      52    Indiana
5  46   17200    60      52    Indiana
6  49   35000    21      52    Indiana
```

End of repeated scenario.

You need to sort the data from the dataset sample and to remove duplicates by using wkswork1.

Which R code segment should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

```
rxSort(inData = [sampleInData], outFile = [sampleOutData], sortByVars = c("incwage", "perwt", "age", "wkswork1"),
```

<input type="checkbox"/>	<input type="checkbox"/>	= "wkswork1")
removeDupKeys = FALSE	dupFreqVar	
removeDupKeys = TRUE	varsToDrop	
rxMerge = FALSE	varsToKeep	
rxMerge = TRUE		

Correct Answer:

Answer Area

`rxSort(inData = [sampleInData], outFile = [sampleOutData], sortByVars = c("incwage", "perwt", "age", "wkswork1"),`

`removeDupKeys = FALSE`
`removeDupKeys = TRUE`
`rxMerge = FALSE`
`rxMerge = TRUE`

`dupFreqVar`
`varsToDrop`
`VarsToKeep`

`= "wkswork1")`

QUESTION 2

You need to run a large data tree model by using rxDForest. The model must use cross validation. Which rxDForest option should you use?

- A. maxSurrogate
- B. maxNumBins
- C. maxDepth
- D. maxCompete
- E. xVal

Correct Answer: E

References: <https://docs.microsoft.com/en-us/machine-learning-server/r/how-to-revoscaler- decision-tree>

QUESTION 3

You have a Microsoft SQL Server instance that has R Services (In-Database) installed. The server has a comma-separated values (CSV) file stored in the local file system.

For analytic purposes, you need to read the CSV file into a database table in the SQL Server instance.

You connect to the SQL Server instance by using SQL Server Management Studio.

What should you use from `sp_execute_external_script`?

- A. `RxSqlServerData` and specify the CSV file path in the connection string
- B. `rxDataStep` and specify the CSV file path as the `inFile` argument
- C. `rxImportToXdf` and specify specify the CSV file as the input
- D. `read.csv` and specify the CSV file path as the parameter

Correct Answer: D

QUESTION 4

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

You have a dataset that contains the physical characteristics of people. You need to visualize a relationship between height and weight for a subset of observations in the dataset.

What should you use?

- A. the Describe package
- B. the rxHistogram function
- C. the rxSummary function
- D. the rxQuantile function
- E. the rxCube function
- F. the summary function
- G. the rxCrossTabs function
- H. the ggplot2 package

Correct Answer: H

QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft SQL Server instance that has R Services (In-Database) installed.

You need to monitor the R jobs that are sent to SQL Server.

Solution: You create an events trace configuration file and place the file in the same directory as the BXLServer process.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B
