QUESTION 1

Note: This question is part of a series of questions that use the same scenario, For your convenience the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is the

same in each question in this series.

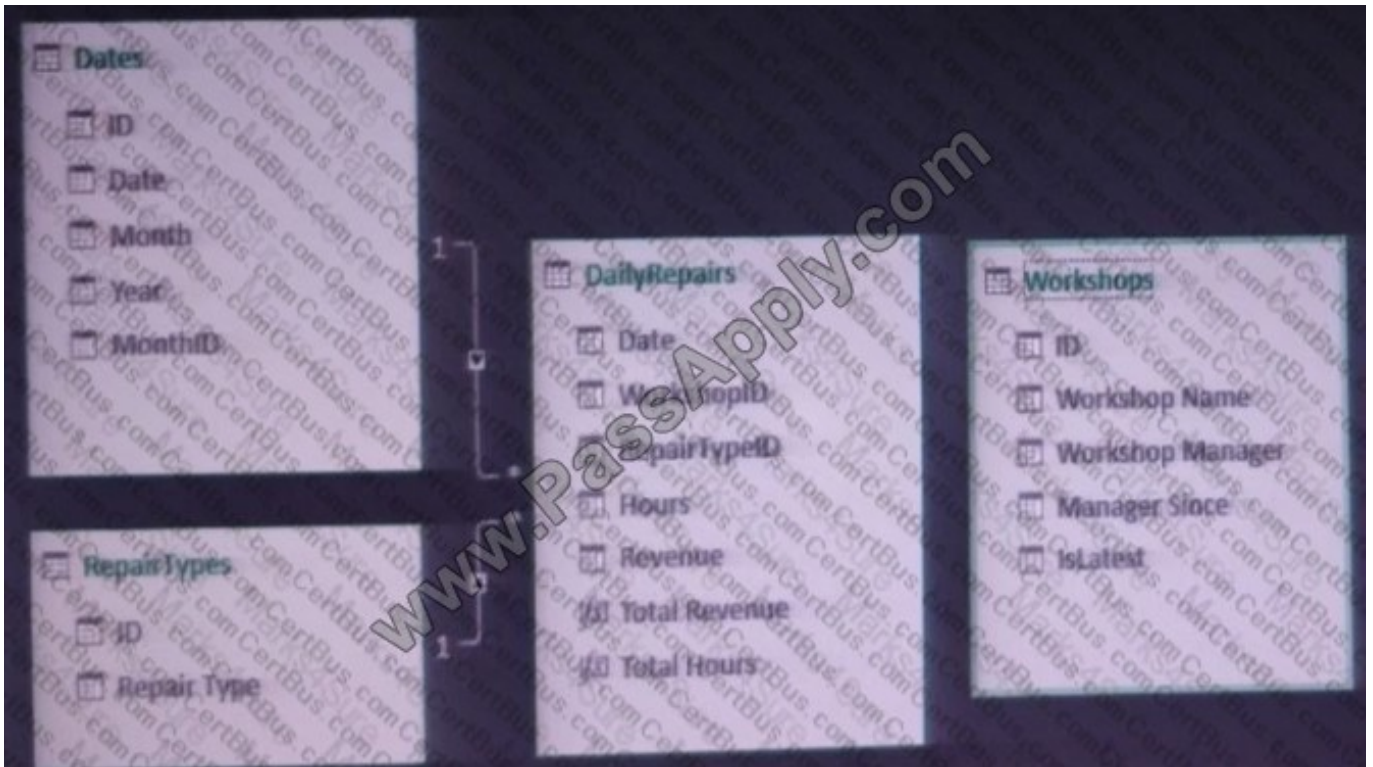

Start of repeated scenario

You are creating reports for a car repair company. You have four datasets in Excel spreadsheets. Four workbook queries load the datasets to a data model. A sample of the data is shown in the Data Sample exhibit.

The exhibit shows four Excel spreadsheets:

- DailyRepairs**: A table with columns Date, WorkshopID, RepairTypeID, Hours, and Revenue. It contains 9 rows of repair data.
- Workshops**: A table with columns ID, Workshop Name, Workshop Manager, Manager Since, and IsLatest. It contains 6 rows of workshop information.
- Dates**: A table with columns ID, Date, Month, Year, and MonthID. It contains 9 rows of date data for January 2016.
- RepairTypes**: A table with columns ID and Repair Type. It contains 9 rows of repair categories.

The data model is shown in the Data Model exhibit.

The tables in the model contain the following data:

DailyRepairs has a log of hours and revenue for each day, workshop, and repair type. Every day, a log entry is created for each workshop, even if no hours or revenue are recorded for that day. Total Hours and Total Revenue are two measures defined in DailyRepairs. Total Hours sums the Hours column, and Total Revenue sums the Revenue column. Workshops has a list of all the workshops and the current and previous workshop managers. The format of the Workshop Manager column is always Firstname Lastname. A value of 1 in the IsLatest column indicates that the workshop

manager listed in the record is the current workshop manager. RepairTypes has a list of all the repair types.

Dates has a list of dates from 2015 to 2018.

End of repeated scenario.

You create the column chart shown in the Pivot Chart exhibit.

You need to ensure that the month axis is displayed chronologically. What should you do?

- A. In the model, configure the Sort By Column setting for [Month] as [MonthID].
- B. In the model, configure the Sort By Column setting for (Month) as [Date].
- C. In PivotTable Fields, add [MonthID] to the Legend area.
- D. In PivotTable Fields, add [Date] to the Legend area.

Correct Answer: A

QUESTION 2

You have a date column named [Date] in the format of mm-dd-yyyy.

You need to create a column named Quarter that displays the yearly quarter. A sample of the desired data is shown following table.

Date	Quarter
01-01-2017	Qtr 1
03-30-2017	Qtr 1
04-01-2017	Qtr 2
06-30-2017	Qtr 2
07-01-2017	Qtr 3
09-30-2017	Qtr 3
10-01-2017	Qtr 4
12-31-2017	Qtr 4

How should you complete the DAX formula? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Hot Area:

Correct Answer:

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

You have the following data.

OrderDate	OrderNumber	ProductName	OrderQuantity
1/28/2018	998989	Product3	10
1/28/2018	998990	Product1	22
1/28/2018	998991	Product2	21
1/29/2018	998992	Product3	43
1/29/2018	998993	Product2	56
1/29/2018	998994	Product3	12

You need to retrieve a list of the unique ProductName entries.

Solution: Create a PivotTable that uses the ProductName field in the Values area.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have two Microsoft SQL Server database servers named Production1 and Test1. Production1 contains the same tables as Test1. but only a subset of the data.

You add Test1 as a data source, and you select 10 tables. You configure several transformations.

You need to connect the model to the tables in Production1. The solution must maintain the existing transformations.

Solution You create a new connection to Production1, and then you import the tables.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 5

You have a table named Date that contains the following data.

DateKey (Whole Number)	FullAlternateDateKey (Date)	MonthName (Text)
20050101	1/1/05	January
20050102	1/2/05	January
20050103	1/3/05	January
20050104	1/4/05	January

SalesOrderID (Whole Number)	OrderDate (Date)	PurchaseOrderNumber (Text)	AccountNumber (Text)
43659	5/31/11 12:00 AM	PO522145787	10-4020-000676
43660	5/31/11 12:00 AM	PO18850127500	10-4020-000117
43661	5/31/11 12:00 AM	PO18473189620	10-4020-000442
43662	5/31/11 12:00 AM	PO18444174044	10-4020-000227

You plan to create Pivot Charts that will be sliced by MonthName.

You need to create a relationship between Sales and Date.

Which Columns should you use to create the relationship? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
