QUESTION 1

Your network contains 500 client computers that run Windows 7 and a custom application named Appl. Appl uses data stored in a shared folder.

You have a failover cluster named Cluster1 that contains two servers named Server1 and Server2. Server1 and Server2 run Windows Server 2012 and are connected to an iSCSI Storage Area Network (SAN).

You plan to move the shared folder to Cluster1.

You need to recommend which cluster resource must be created to ensure that the shared folder can be accessed from Cluster1.

What should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

- A. The Generic Application cluster role
- B. The DFS Namespace Server cluster role
- C. The clustered File Server role of the File Server for general use type
- D. The clustered File Server role of the File Server for scaleout application data type

Correct Answer: C

QUESTION 2

Your network contains an Active Directory domain named contoso.com.

You currently have an intranet web site that is hosted by two Web servers named Web1 and Web2. Web1 and Web2 run Windows Server 2012.

Users use the name intranet.contoso.com to request the web site and use DNS round robin. You plan to implement the Network Load Balancing (NLB) feature on Web1 and Web2. You need to recommend changes to the DNS records for the

planned implementation.

What should you recommend?

- A. Create a service locator (SRV) record. Map the SRV record to Intranet.
- B. Delete both host (A) records named Intranet. Create a pointer (PTR) record for each Web server.
- C. Remove both host (A) records named Intranet. Create a new host (A) record named Intranet.
- D. Delete both host (A) records named Intranet. Create two new alias (CNAME) records named Intranet. Map each CNAME record to a Web server name.

Correct Answer: C

**QUESTION 3**

You have a domain controller that hosts an Acti Directory-integrated zone. On the domain controller, you run the following cmdlet: PS C:\> Get-DnsServerScavenging NoRefreshInterval:2.00:00:00 RefreshInterval:3.00:00:00 ScavengingInterval:4.00:00:00 ScavengingState:True LastScavengeTime:1/30/2014 9:10:36 AM Use the drop-down menus to select the answer choice that completes each statement.

Answer Area

If a client dynamically registers a record in DNS, the client can update the time stamp of the record [answer choice]

If a client dynamically registers a record in DNS and then the client's IP address changes, the client can update the record [answer choice]

Answer Area

If a client dynamically registers a record in DNS, the client can update the time stamp of the record [answer choice]

If a client dynamically registers a record in DNS and then the client's IP address changes, the client can update the record [answer choice]

immediately.
only after two days.
only after three days.
only after four days.
only after five days.
only after six days.
only after seven days.

immediately.
only after two days.
only after three days.
only after four days.
only after five days.
only after six days.
only after seven days.

**Answer Area**

If a client dynamically registers a record in DNS, the client can update the time stamp of the record [answer choice]

If a client dynamically registers a record in DNS and then the client's IP address changes, the client can update the record [answer choice]

Answer Area

If a client dynamically registers a record in DNS, the client can update the time stamp of the record [answer choice]

- immediately.
- only after two days.
- only after three days.
- only after four days.
- only after five days.
- only after six days.
- only after seven days.

If a client dynamically registers a record in DNS and then the client's IP address changes, the client can update the record [answer choice]

- immediately.
- only after two days.
- only after three days.
- only after four days.
- only after five days.
- only after six days.
- only after seven days.

Correct Answer:

**Answer Area**

If a client dynamically registers a record in DNS, the client can update the time stamp of the record [answer choice]

If a client dynamically registers a record in DNS and then the client's IP address changes, the client can update the record [answer choice]

Answer Area

If a client dynamically registers a record in DNS, the client can update the time stamp of the record [answer choice]

- immediately.
- only after two days.
- only after three days.
- only after four days.
- only after five days.
- only after six days.
- only after seven days.

If a client dynamically registers a record in DNS and then the client's IP address changes, the client can update the record [answer choice]

- immediately.
- only after two days.
- only after three days.
- only after four days.
- only after five days.
- only after six days.
- only after seven days.

QUESTION 4

You need to recommend a deployment method for Proseware.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. A WDS Deployment server and Multicast transmissions
- B. A WDS Deployment server and Unicast transmissions
- C. A WDS Transport server and Multicast transmissions
- D. A WDS Transport server and Unicast transmissions

Correct Answer: A

QUESTION 5

Contoso.Ltd, has an Active Directory Domain Services (AD DS) domain named contoso.com. The domain and forest functional levels are set to Windows Server 2008 R2. You have a properly configured certification authority (CA). All

servers run Windows Server 2012 R2.

You have the following requirements.

Users must not be able to attach specific documents to email messages or copy the files to a personal USB device.

Finance department users must be able to access the solution from their domainjoined windows devices on the corporate network over the internet without any additional configuration

Finance department uses must be able to access the documents even if the primary server fails.

What should you do?

- A. Upgrade the domain functional level to Windows 2012 or higher.
- B. Install Active Directory Federation Services (AD FS), and integrate the Active Directory Rights Managements Services server with AD FS.
- C. Ensure that the internal and external URLs for the Active Directory Rights Management Services cluster are the same.
- D. Implement an Active Directory Rights Management Services cluster and place at least one cluster node in the perimeter network

Correct Answer: D
