QUESTION 1

Which two ways does Cisco HyperFlex upgrade the traditional RAID? (Choose two.)

A. HyperFlex enables stretched RAID arrays spanning multiple geographic sites.

B. Hardware replacement initiates self-healing with minimal impact

C. Limiting the number of drives locally, which are not a part of the shared datastore.

D. Distributing data locally, not just across the hosts in HyperFlex cluster

E. Eliminating the need for additional hardware cards, while maintaining high performance.

Correct Answer: BE

QUESTION 2

Which two features enable RAID cards striping as well as mirroring and parity? (Choose two.)

A. Integration with Cisco Intersight for a cloud-based storage management solution.

B. No load on the system resources, drives seem as one drive to the operating system

C. On RAID card failure, the RAID onboard concurrent cache assists rebuild cache.

D. Hot replacement of drives available, depending on configuration

E. Distributed drives across disparate systems can be in RAID together.

Correct Answer: BD

QUESTION 3

HyperFlex compute nodes contribute what percentage of the overall disk storage capacity?

A. 5%

B. 20%

C. 0%

D. 10%

Correct Answer: C

QUESTION 4

Which statement about Standalone Cisco UCS Server Deployments is valid?

A. They require Cisco Fabric Interconnects to operate, which reduces the Operating Expenses (OpEx) associated with the deployment

B. They do not require Cisco Fabric Interconnects to operate, which reduces the Operating Expenses (OpEx) associated with the deployment

C. They do not require Cisco Fabric Interconnects to operate, which reduces the Capital Expenses (CapEx) associated with the deployment

D. They require Cisco Fabric Interconnects to operate, which reduces the Capital Expenses (CapEx) associated with the deployment

Correct Answer: C

QUESTION 5

When local writing or reading is performed, the lOVisor intercepts the read/write requests and forwards them to CVMs across the cluster This action allows non-local CVMs to be aware of the input/output requests so that they can perform the appropriate input/output action lOVisor provides which two additional functionalities? (Choose two.)

A. provides redundancy when local CVM fails, offloading data processing to another CVM in the cluster

B. when an lOVisor fails, the CVM remains active and functional, which enables uninterrupted operation of the system by forwarding 10 to another available lOVisor In the HyperFlex cluster

C. enables asynchronous replication of data across individual HyperFlex nodes with sub-second re-convergence

D. integration point for deployment of cloud-based SaaS offerings from eco-system partners

E. intercepts local virtual machines\' reads and writes and distributes them across the network eliminating hotspots

Correct Answer: AE
