QUESTION 1

With Automatic On-Net to Off-Net Overflow, if all on-net facilities such as TIE trunks between locations are busy, NARS can convert a dialed UDP number to a Listed Directory Number of the applicable DID number at that location and use off-net facilities, such as CO trunks, to complete the call. When provisioning Automatic On-Net to Off-Net Overflow, which parameter is not correct?

- A. Only one Listed Directory Number can be defined per Location Code (LOC).
- B. Multiple NPAs per Location Code are allowed.
- C. Multiple NXX codes per Location Code can be defined.
- D. Multiple ranges of DNs within each NXX per Location Code can be defined.

Correct Answer: D

QUESTION 2

When configuring Zone Based Dialing, what option would you select to create new zones for routing calls through a centralized Call Server?

- A. Numbering Zones link
- B. Bandwidth Zones link
- C. Dialing Configuration Details link
- D. Dialing Configuration Details for Flexible Dial Plan link

Correct Answer: D

QUESTION 3

Click the Exhibit button.

Given a company's dialing plan shown in the exhibit, if a station user at the company in the New York City is attempting to place a call to Albany and the station dial AC1+661+7449, what will happen to the call?

- A. The call will terminate at the Boston location at extension 7449.
- B. The call will not complete and the user will receive the interface treatment as defined in the Customer Data Block (CDB) for that customer.
- C. The call will terminate at the Albany location at extension 7449.
- D. The call will terminate at the LDN of 518-267-7300 over Route 10

Correct Answer: C

QUESTION 4

Given the following network characteristics:

three Communication Server 1000 RIs. 7 x systems IP Peer Networking required DN uniqueness cannot be maintained route calls using site Location Codes (LOCs)

Which type of dialing plan is recommended for this call routing scenario?

- A. Flexible Numbering Plan (FNP)
- B. Coordinated Dialing Plan (CDP)
