QUESTION 1

A newly-hired CISO needs to understand the organization\\'s financial management standards for business units and operations. Which of the following would be the best source of this information?

A. The internal accounting department

B. The Chief Financial Officer (CFO)

C. The external financial audit service

D. The managers of the accounts payables and accounts receivables teams

Correct Answer: B

QUESTION 2

Simon had all his systems administrators implement hardware and software firewalls to ensure network security. They implemented IDS/IPS systems throughout the network to check for and stop any unauthorized traffic that may attempt to enter. Although Simon and his administrators believed they were secure, a hacker group was able to get into the network and modify files hosted on the company\\'s website. After searching through the firewall and server logs, no one could find how the attackers were able to get in. He decides that the entire network needs to be monitored for critical and essential file changes. This monitoring tool alerts administrators when a critical file is altered. What tool could Simon and his administrators implement to accomplish this?

A. They need to use Nessus.

B. They can implement Wireshark.

C. Snort is the best tool for their situation.

D. They could use Tripwire.

Correct Answer: D

QUESTION 3

QUESTION 4

Risk appetite is typically determined by which of the following organizational functions?

A. Business units

B. Board of Directors

C. Audit and compliance

D. Security

Correct Answer: B

The risk appetite of an organization refers to the level of risk that an organization is willing to accept to achieve its objectives. This decision is typically made by senior management or the board of directors, as they are responsible for setting the overall strategic direction and risk tolerance of the organization. Business units, audit and compliance, and security may provide input into the risk appetite decision-making process, but they do not typically have the authority to make the final decision.

QUESTION 5

The process to evaluate the technical and non-technical security controls of an IT system to validate that a given design and implementation meet a specific set of security requirements is called_____.

A. Security certification

B. Security accreditation

C. Alignment with business practices and goals.

D. Security system analysis

Correct Answer: A
