QUESTION 1

You prepare a response to a client\\'s request for proposal (RFP) for a Lync network readiness assessment.

The client\\'s network includes a main office that houses 500 employees and 30 branch offices that house 20 to 100 employees each. All sites are connected by a Multiprotocol Label Switching (MPLS) network. The client plans to use Lync

video and upload and share Microsoft PowerPoint presentations.

The client wants to perform a Lync network assessment.

You need to include the required tasks in the RFP response, in the correct order.

Which four tasks should you perform in sequence? (To answer, move the appropriate four actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

| Calculate bandwidth for content sharing. |
| Select sites for Lync traffic simulation. |
| Identify asymmetric links. |
| Document findings and recommendations. |
| Estimate bandwidth required for Remote Desktop Protocol (RDP). |
| Identify call flows. |

Correct Answer:

	Calculate bandwidth for content sharing.
	Estimate bandwidth required for Remote Desktop Protocol (RDP).
Identify asymmetric links.	Select sites for Lync traffic simulation.
	Document findings and recommendations.
Identify call flows.	

Note:

* In order:

* The network assessment uses a proven methodology to:

/ Discover your environment.

/ Model your usage patterns and usage scenarios by using information collected during discovery, with the help of the Lync Bandwidth Calculator.

/Simulate the anticipated Lync Server traffic volumes by using real media streams for a full seven days.

/ Analyze the underlying network infrastructure performance characteristics to determine your readiness in deploying Lync Server.

After you identify the scenarios to simulate traffic, coupled with the anticipated total bandwidth required, you

QUESTION 2

You need to define the goals that you would like to achieve after you perform usage modeling of Lync traffic in Contoso. Which two goals should you establish? (Each correct answer presents part of the solution. Choose two.)

A. Confirm that the volume of Lync traffic does not exceed 25 percent of wide area network (WAN) bandwidth.

B. Confirm that bandwidth is sufficient for Microsoft Office 365 Hybrid Lync deployment.

C. Confirm that the volume of Lync traffic does not exceed 5 megabits per second (Mbps).

D. Confirm that bandwidth is sufficient for 40 new Litware, Inc. Lync users.

E. Confirm that bandwidth is sufficient for 80 new Litware, Inc. Lync users.

Correct Answer: AD

QUESTION 3

You need to determine which connection will be most affected by the Office 365 users. Which two connections should you select? (Each correct answer presents Choose two.)

A. The internet connection at the Vancouver office.

B. The site-to-site virtual private network (VPN) between the Vancouver and Seattle offices.

C. The PSTN connection at the Vancouver office.

D. The internet connection at the Seattle office.

E. The PSTN connection at the Seattle office.

Correct Answer: AD

* From scenario:

/ Contoso is launching a hybrid configuration of Office 365 to validate the cloud-based Exchange Online service.

/ Contoso has defined a team of 35 users who will participate in a pilot deployment of the Office 365 hybrid configuration.

/ The Exchange 2013 Servers are placed in Vancouver

QUESTION 4

You analyze Lytic traffic modeling for a customer\\'s network. The network includes a main office, a data center, and five branch offices. Lync servers are consolidated in the data center. The main office and the data center are connected to a Multiprotocol Label Switching (MPLS) network. The branch offices are connected to the main office with virtual private network (VPN) links. The model uses all Lync modalities for all users. The network topology diagram is shown in the exhibit. (Click the Exhibit button.)

The model indicates that the main office exceeds the bandwidth available for Lync over the MPLS link by 10 percent. The utilization of VPN links available for Lync traffic is at almost 100 percent.

You need to recommend a change to optimize Lync traffic through the main office MPLS link.

What should you recommend?

A. Move the Lync pool to the main office.

B. Move the Lync pool to a branch office.

C. Deploy a Survivable Branch Appliance (SBA) at all branches.

D. Deploy a Survivable Branch Appliance (SBA) at the main office.

Correct Answer: A

QUESTION 5

You need to identify the quality metrics that are responsible for the poor quality of audio calls for users in the Seattle office. Which quality metric should you identify?

A. average packet loss rate

B. maximum round trip

C. burst gap duration

D. average jitter

Correct Answer: A
