### QUESTION 1

A company has a server that has System Center 2012 R2 Virtual Machine Manager (VMM) installed. A specific user must be able to create logical networks in VMM. You need to grant the user the required permissions. What should you do?

- A. in VMM, grant the user the Administrator role.
- B. in VMM, create a self-service role that has the Deploy action assigned.
- C. in Server Manager, add the user to the local Administrators group.
- D. In VMM, grant the user the Tenant Administrator role.

Correct Answer: A

Ref: <http://technet.microsoft.com/en-us/library/gg610588.aspx> Account requirements To complete this procedure, you must be a member of the Administrator or the Delegated Administrator user role. Delegated administrators can only associate a logical network to host groups that are included in their administrative scope.

---

### QUESTION 2

You administer an environment that contains a Windows Server 2012 R2 server that has the Hyper-V role installed and a server that has System Center 2012 R2 Virtual Machine Manager (VMM). You plan to deploy two virtual machines (VMs).

You have the following requirements:

You must minimize the likelihood that the VMs will be offline at the same time.

You must minimize the likelihood that the VMs will reside on the same Hyper-V host server in the Hyper-V cluster.

You need to configure the two VMs. What should you do?

- A. Configure the two VMs to include a value for the preferred owners setting.
- B. Configure only one VM as highly available.
- C. Configure the VMs to reside on different storage area networks (SANs).
- D. Configure the VMs to use a custom property that contains the same value. Then, configure the VMs as members of the same availability set.

Correct Answer: B

---

### QUESTION 3

You are the virtualization administrator for an organization. The organization uses all components of System Center

---

2012 R2 in the production environment. A power supply in a Hyper-v host server fails. The host server continues to run and

host virtual machines in this degraded state.

You have the following requirements:

Move virtual machines from host servers that are running in a degraded state to another host server.

Prevent placement of new virtual machines on degraded host servers.

You need to configure the environment.

Which System Center feature should you implement?

- A. Dynamic Optimization
- B. Performance and Resource Optimization (PRO)
- C. Shared VHDX files
- D. Placement Rules

Correct Answer: B

Ref: <http://technet.microsoft.com/en-us/gg552992.aspx>

What is Performance and Resource Optimization (PRO)?

PRO helps ensure that virtual machine hosts and virtual machines are operating in the most efficient possible manner. PRO generates recommendations for remedial actions based on alerts that Operations Manager generates. You can

configure PRO to implement the preconfigured corrective actions automatically.

---

#### QUESTION 4

A company has offices in Hamburg, New York, and San Francisco. The Hamburg office has one Hyper-V host server named HAM-HOST1. The New York office has two Hyper-V host servers named NYC-HOST1 and NYC-HOST2. The San

Francisco office has one Hyper-V host server named SFC-HOST1. All Hyper-V host servers run Windows Server 2012 R2.

You must deploy an application virtual machine (VM) that will be used by the sales team at the company.

You need to ensure that the VM remains available during unplanned system outages.

Which solution should you implement?

- A. a Hyper-V cluster that includes NYC-HOST1 and NYC-HOST2
- B. Server Message Block (SMB) 3.0 file shares on NYC-HOST1, NYC-HOST2, SFC-HOST1, and HAM-HOST1
- C. a Distributed File System (DFS) replication between NYC-HOST1, SFC-HOST1, and HAM-HOST1

D. dynamic optimization on NYC-HOST1 and NYC-HOST2

Correct Answer: A

---

#### QUESTION 5

You administer a server that runs Windows Server 2012 R2 that has the Hyper-V role installed. You plan to apply an update to a virtual machine (VM). You have the following requirements:

You must be able to quickly revert back to a pre-update state.

The solution must minimize storage requirements on the server.

You need to apply the update. What should you do?

- A. Run the Windows PowerShell cmdlet New-VirtualDiskClone.
- B. Create a checkpoint of the VM.
- C. Run the Windows PowerShell cmdlet Export-VMSnapshot.
- D. Export the VM.

Correct Answer: B
