QUESTION 1

You have a server named Server1. Server1 is the member of a workgroup.

On Server1, you create a local user account named User1, as shown in the following exhibit. (Click the Exhibit button.)

On Server1, you create a share named Share1. You assign User1 Full control permissions to Share1. You copy the source files for Windows 8 to Share1.

When attempting to access Share1 from Windows Preinstallation Environment (Windows PE), User1 receives an error message.

You need to ensure that User1 can access Share1 from Windows PE.

What should you do?

A. From Server1, modify the Advanced Sharing properties.

B. Clear the Password never expires check box for the user account of User1.

C. Add a password to the user account of User1.

D. From Server1, modify the Advanced settings in System Properties.

Correct Answer: C

QUESTION 2

You are an OEM system builder.

You customize push-button reset for a custom Windows 8 deployment.

You need to test the Reset your PC feature.

What should you use?

A. System Properties

B. Action Center

C. System Restore

D. Pc Settings

Correct Answer: D

QUESTION 3

You have a technician computer that has the Windows Assessment and Deployment Kit (Windows ADK) installed.

You have a Windows Preinstallation Environment (Windows PE) build environment that con- tains the Boot.wim image.

You need to add Imagex.exe to Windows PE. You mount Boot.wim.

What should you do next?

A. From Windows System Image Manager, add the path to Imagex.exe to the section of the Unattend.xml file.

B. From Windows Explorer, copy Imagex.exe.

C. Add Imagex.exe to the third line of the Startnet.cmd file.

D. Run dism.exe /add-package.

Correct Answer: B

QUESTION 4

You plan to deploy operating systems to several servers. The servers have RAID controllers.

You plan to install three hard disks on each server.

You need to configure the servers to meet the following requirements:

Ensure that all data will be available if a single disk fails.

Provide the highest amount of disk space to store files. Which RAID level should you configure on the servers?

A.

RAID 0

B.

RAID 1

C.

RAID 5

D.

RAID 6

Correct Answer: C

QUESTION 5

Your company\\'s deployment environment contains the following: One subnet One Active Directory domain Two servers that run Windows Server 2012

You need to recommend a solution to deploy an image to at least 100 client computers simulta- neously.

The solution must start deploying the image automatically when 20 client computers are avail- able to receive the image.

What should you include in the recommendation?

A. The Multipath I/O (MPIO) feature and the File Server role

B. The Windows Deployment Services server role that contains a Scheduled-Cast transmission

C. The Windows Deployment Services server role that contains an Auto-Cast transmission

D. The Scale-Out File Server for application data role and the Reliable Multicast Protocol

Correct Answer: B
