- A. IPSec
- B. PPTP
- C. MPPE
- D. SSTP

Correct Answer: C

QUESTION 2

For each of the following statements, select Yes if the statement is true. Otherwise, select No. Each correct selection is worth one point.

Hot Area:

Answer Area

	Yes	No
The local Administrator account on a Windows Server 2008 R2 server can be renamed.	<input type="radio"/>	<input type="radio"/>
The local Administrator account on a Windows Server 2008 R2 server can be deleted.	<input type="radio"/>	<input type="radio"/>
The local Administrator account on a Windows Server 2008 R2 server is disabled by default.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Answer Area

	Yes	No
The local Administrator account on a Windows Server 2008 R2 server can be renamed.	<input checked="" type="radio"/>	<input type="radio"/>
The local Administrator account on a Windows Server 2008 R2 server can be deleted.	<input type="radio"/>	<input checked="" type="radio"/>
The local Administrator account on a Windows Server 2008 R2 server is disabled by default.	<input type="radio"/>	<input checked="" type="radio"/>

QUESTION 3

This question requires that you evaluate the underlined text to determine if it is correct.

You install a new Windows Server 2016 server for your school athletic department. The installation completes without errors. However, the new server is unable to communicate with the network. After checking cable connections and network

configuration, you find that no network connections are listed in the Control Panel/Network Connections applet.

You should use "Device Manager" to investigate a potential problem with the network adapter driver.

Select the correct answer if the underlined text does not make the statement correct. Select "No change is needed\\\" if the underlined text makes the statement correct

- A. Network and Sharing Center
- B. Control Panel/Network Connections
- C. Server Manager/WMI Control
- D. No change is needed

Correct Answer: D

The Device Manager is a Control Panel applet in Microsoft Windows operating systems. It allows users to view and control the hardware attached to the computer. When a piece of hardware is not working, the offending hardware is highlighted for the user to deal with.

QUESTION 4

You want to compare the performance reports that you have created during the initial deployment of servers. Which of the following applications will you need to launch in order to create a comparison report?

- A. Task manager
- B. Performance Monitor
- C. Resource Monitor
- D. Server Manager

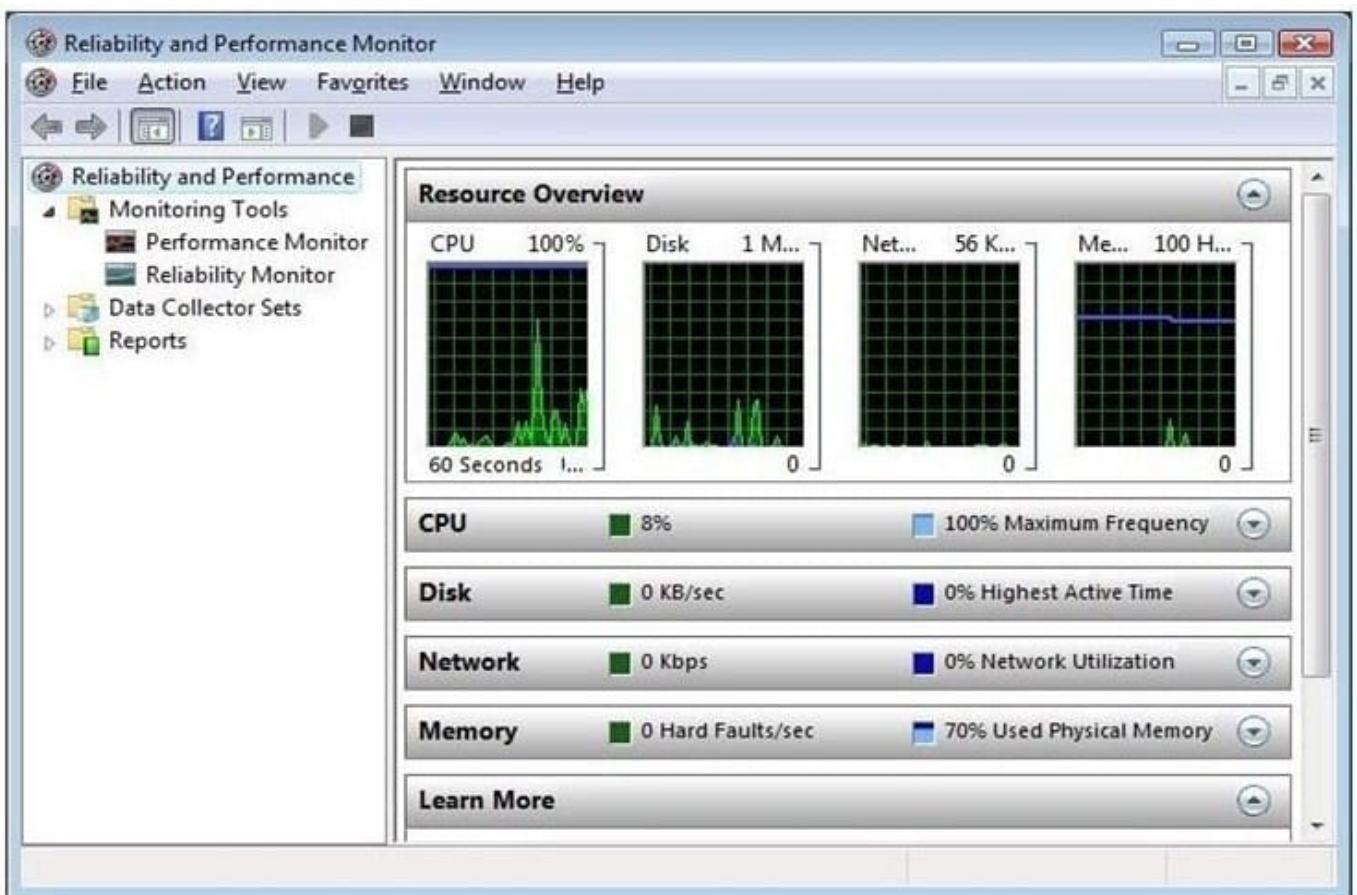

Correct Answer: B

In order to create a comparison report, you are required to launch Performance Monitor. Performance Monitor is a powerful virtualization tool that adds an extra layer of performance monitoring needs. It helps in viewing performance data,

both in real time and from log files. The performance data can be examined in a graph, histogram, or report.

It properly diagnoses and troubleshoots SharePoint performance problems.

It also helps organizations to decide when to upgrade the hardware and whether upgrades are improving the performance of servers or not.

Incorrect Answers:

A: A task manager is a program used to provide information about the processes and programs running on a computer, as well as the general status of the computer. It can also be used to terminate processes and programs, as well as

change the processes priority. The task manager is most commonly accessed by pressing the buttons Control-Alt-

Delete. Task manager also displays all the services that are currently running as well as those that were stopped. All information\\s about the services such as Process ID and their group if they are applicable.

C: Resource Monitor is a suite of administration tools designed to provide a quick overview of a single user interface. It acts as a mediator between the Cluster service and the resource dynamic link library. It can be launched from the start menu or from the Task Manager using the Performance tab. Resource Monitor can be accessed by searching in the Reliability and Performance monitor.

D: Server Manager is a primary tool available in Windows Server 2016. It manages and secures multiple server roles in an enterprise. The Server Manager console allows an administrator to perform the following tasks:

Install Windows Server roles and features.

View the Event Viewer logs. Access performance monitoring tools, Device Manager, Task Scheduler, Windows Firewall with Advanced Security, Services, Local Users and Groups, Windows Server Backup, and Disk management.

QUESTION 5

You purchase a device from an online retailer and install it in a computer running Windows Server 2016. You are having intermittent problems and want to look for an updated driver.

You attempt to update the driver through Device Manager, but the utility is unable to find an updated driver.

Where should you look next?

- A. Microsoft Windows Download Center
- B. online retailer technical support
- C. Windows installation software disk
- D. the device manufacturer website

Correct Answer: A
