QUESTION 1

What popular application is used to access a Windows server remotely?

- A. remote assistance
- B. remote desktop
- C. TELNET
- D. SSH

Correct Answer: B

With early networks, users utilized dumb terminals (systems consisting of a monitor and keyboard without a processor) to connect to a mainframe. Later, computers could use TELNET to connect to a server and execute commands at a command prompt. Remote Desktop Services, formerly known as Terminal Services, is one component of Microsoft Windows that allows users to access applications and data on remote computers over a network.

QUESTION 2

What technology allows you to perform network-based unattended installation of Windows operating systems, including Windows Server 2016?

- A. WDS
- B. RIS
- C. SMB
- D. HTTP

Correct Answer: A

Windows Deployment Services (WDS) is a Microsoft technology for network-based installation of Windows operating systems. You can fully automate and customize the deployment of Windows through the use of unattended installation scripting files.

QUESTION 3

You enable Remote Desktop.

Which group will be granted access by default?

- A. Domain users group
- B. Remote access security group
- C. Local administrators group
- D. Local users group

Correct Answer: C

Configure Remote Desktop Access on Windows 10 Systems Remote Desktop is not enabled by default. You must specifically enable it to allow remote access to the workstation. When it is enabled, any member of the [local] Administrators group can connect to the workstation. Other users must be placed on a remote access list to gain access to the workstation.

QUESTION 4

Which of the following server roles simplifies the process of deploying applications that respond to requests sent over the network from remote applications?

- A. Windows Server Virtualization
- B. Network Policy and Access Services
- C. Active Directory Certificate Services
- D. Application Server

Correct Answer: D

Application Server is an expanded server role of Windows Server 2016 that simplifies the process of deploying applications that respond to requests sent over the network from remote applications. Windows Server 2016 provides support for

applications by enhancing application availability and accessibility through the Application Server role. The Application Server role provides environment for deploying and running line-of-business (LOB) applications that are built with the

Microsoft .NET Framework.

The features provided by Application Server role are provided in the table below:

During the server role installation, administrators select services that support applications that are designed to use COM+, Message Queuing, Web services, and distributed transactions. Microsoft recommends installing the Application Server

role when a custom business application is deployed on the network and the developer has indicated that specific role services are required.

Incorrect Answers:

A: The Windows Server Virtualization server role is a server role of Windows Server 2008. It was renamed to Hyper-V in later versions of Windows. This server role offers services for creating and managing virtual machines and their

resources. A virtual machine is a computer system that allows a user to run more than one operating system simultaneously.

B: The Network Policy and Access Services server role is a server role of Windows Server 2016. This server role offers various methods to provide users with local and remote network connectivity, to connect network segments, and to permit

network administrators to centrally manage network access and client health policies.

These methods use VPN servers, dial-up servers, routers, and 802.11 protected WAP (wireless access point).

| Feature | Description |
|---------------------|--|
| Installation Wizard | The Installation Wizard helps administrators to choose the various role services and features required to run applications. For a given role services, it automatically installs the features provided |
| Core runtime | Core runtime supports the deployment and management of of high-performance business applications. |
| The .NET Framework | The .NET Framework provides a development environment for execution of server-based applications. |
| Web Services | The Web services, which is enabled by .NET Framework, integrates new and existing applications with the server infrastructure. |

C: The Active Directory Certificate Services server role is a server role of Windows Server 2016. This server role offers services to create and manage public key certificates that are used in software security systems. These software security systems use public key technologies to verify the identity of a person, device, or service, which can be used by secure mail, secure wireless networks, VPNs, IPSec, EFS, smart card logon, and others.

QUESTION 5

You are using the Services Management Console. Which term is used to describe a service that is running?

- A. Started
- B. Activated
- C. Engaged
- D. Working

Correct Answer: A
