QUESTION 1

Your company uses Windows 10 Work Folders on personal devices. The devices are all registered in Microsoft Intune.

You need to enforce the following security requirements on the personal devices:

Company data can be removed if an employee is terminated. Company data cannot be accessed if a device is lost or stolen.

What should you do?

- A. Enable selective wipe, and enforce a lock screen and password
- B. Enable selective wipe, and secure files transfers with SSL
- C. Enable selective wipe, and enforce encryption
- D. Enforce encryption and enforce a lock screen and password

Correct Answer: C

*

Microsoft Intune provides selective wipe, full wipe, remote lock, and passcode reset capabilities. A selective wipe to remove only company data.

*

Encryption on Mobile Devices can be managed with Configuration Manager and Intune

QUESTION 2

This question requires that you evaluate the underlined text to determine if it is correct.

Windows Server Active Directory enables single sign-on without the need for additional services, which simplifies user access to thousands of cloud applications on Windows, Mac, and iOS devices.

Review the underlined text, if it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed
- B. Microsoft Account
- C. Active Directory Federation Services
- D. Azure Active Directory

Correct Answer: D

Azure Active Directory is a comprehensive identity and access management cloud solution that provides a robust set of capabilities to manage users and groups. Azure Active Directory enables single sign-on to simplify user access to thousands of cloud applications from Windows, Mac, Android and iOS devices.

QUESTION 3

This question requires that you evaluate the underlined text to determine if it is correct.

The "Simple Spaces" resiliency type in Windows 8.1 Storage Spaces requires at least five drives in order to protect a system from a single-drive failure. Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed
- B. two-way mirror
- C. Parity Spaces
- D. three-way mirror

Correct Answer: D

Two-way mirror spaces require at least two drives, and three-way mirror spaces require at least five.

Mirror spaces are designed for increased performance and protect your files from drive failure by keeping more than one copy. Two-way mirror spaces make two copies of your files and can tolerate one drive failure, while three-way mirror spaces can tolerate two drive failures.

QUESTION 4

This question requires that you evaluate the underlined text to determine if it is correct.

You have a Windows 8.1 computer in a WorkGroup. To share the C:\Work folder and make it available to offline users, you need to use the "public" share option. Instructions: Review the underlined text. If it makes the statement correct,

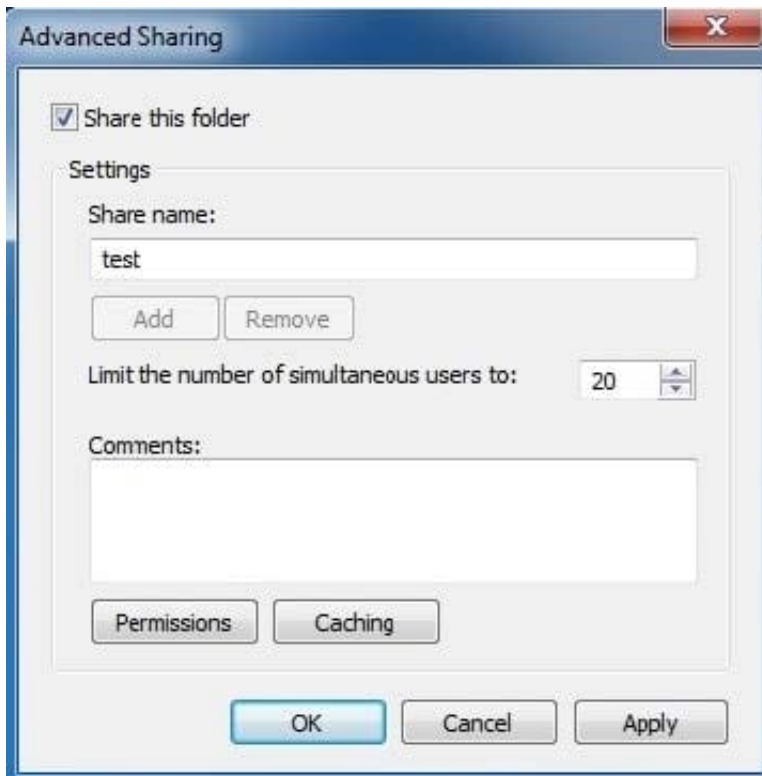

select "No change is needed". If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed
- B. advanced
- C. HomeGroup
- D. basic

Correct Answer: B

In the advanced sharing dialog box Click on "Caching" button. In "Offline settings" dialog box, you can set up caching for files and programs which are offline.

You have the following options:

i) Only the files and programs that users specify are available offline: If you select this option then, users specify the files and programs which can be accessed offline. It is the default option. ii) No files or programs from the share are available

offline: If you select this option then, caching will be turned off. iii) All files and programs that users open from the share are automatically available offline: If you select this option then, caching is turned on for all files and programs and they can be accessed offline. Check option "Optimize for performance".

QUESTION 5

Which is a feature Active Directory Rights Management Services (AD RMS)?

- A. manages Digital Rights Media (DRM) for digital media
- B. provides a permissions system that works with any cloud-based storage solution
- C. manages share and file permissions on all servers in enterprise
- D. allow users to define who can open, modify, print, or forward a document

Correct Answer: D

Windows Rights Management Services (also called Rights Management Services, Active Directory Rights Management Services or RMS) is a form of Information Rights Management used on Microsoft Windows that uses encryption and a form of selective functionality denial for limiting access to documents such as corporate e-mail, Word documents, and web pages, and the operations authorized users can perform on them. Companies can use this technology to encrypt information stored in such document formats, and through policies embedded in the documents, prevent the protected content from being decrypted except by specified people or groups, in certain environments, under certain conditions, and for certain periods of time.
