QUESTION 1

Which is a feature Active Directory Rights Management Services (AD RMS)?

- A. manages Digital Rights Media (DRM) for digital media
- B. provides a permissions system that works with any cloud-based storage solution
- C. manages share and file permissions on all servers in enterprise
- D. allow users to define who can open, modify, print, or forward a document

Correct Answer: D

Windows Rights Management Services (also called Rights Management Services, Active Directory Rights Management Services or RMS) is a form of Information Rights Management used on Microsoft Windows that uses encryption and a form of selective functionality denial for limiting access to documents such as corporate e-mail, Word documents, and web pages, and the operations authorized users can perform on them. Companies can use this technology to encrypt information stored in such document formats, and through policies embedded in the documents, prevent the protected content from being decrypted except by specified people or groups, in certain environments, under certain conditions, and for certain periods of time.

QUESTION 2

This question requires that you evaluate the underlined text to determine if it is correct.

Redundant Microsoft Azure applications are able to meet increased demand with consistent results in acceptable time windows.

Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed
- B. Highly Available
- C. Fault Tolerant
- D. Scalable

Correct Answer: D

Scalable applications are able to meet increased demand with consistent results in acceptable time windows.

When a system is scalable, it scales horizontally or vertically to manage increases in load while maintaining consistent performance. In basic terms, horizontal scaling adds more machines of the same size (processor, memory, bandwidth)

while vertical scaling increases the size of the existing machines.

QUESTION 3

You manage Windows 8 Pro desktop and laptop computers. Which volume types can you encrypt by using BitLocker?

- A. dynamic volumes
- B. simple volumes
- C. virtual hard disks
- D. software-used RAID

Correct Answer: B

Bitlocker supports Basic (simple) volumes.

Incorrect answers:

Not A: Dynamic disks are not supported by BitLocker.

Not C: Bootable and non-bootable virtual hard disks (VHDs)

Not D: Software-based RAID systems are not supported by Bitlocker.

QUESTION 4

You have an external monitor connected to a laptop computer that is running Windows 10. The monitors are configured to provide a panoramic display that continues across both monitors.

You want to move the system tray to the secondary monitor. Both monitors must continue to display screen data.

Which Display setting you select?

- A. Custom scaling
- B. Show only on 2
- C. Extend desktop to this display
- D. Make this my main display

Correct Answer: D

QUESTION 5

This question requires that you evaluate the underlined text to determine if it is correct.

When you access a file located on a shared resource, the "most restrictive" permissions take precedence.

Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed.
- B. ACL
- C. NTFS
- D. share

Correct Answer: A

When using share permissions and NTFS permissions together, if there is a conflict in the configuration, the most restrictive permission prevails.
