-  **800,000+** Satisfied Customers

### QUESTION 1

Which method will be called when a FileStream is collected by the garbage collector?

- A. Unlock
- B. Flush
- C. Finalize
- D. EndWrite

Correct Answer: C

---

### QUESTION 2

You need to force the position of the cursor on the screen at (15, 10).

Which code segment should you use?

- A. 

```
Console.WindowTop = 10;  
Console.WindowLeft = 15;  
Console.ReadKey();
```
- B. 

```
Console.MoveBufferArea(0, 0, 5, 5, 15, 10);  
Console.ReadKey();
```
- C. 

```
Console.SetCursorPosition(15, 10);  
Console.ReadKey();
```
- D. 

```
Console.BufferWidth = 10;  
Console.BufferHeight = 15;  
Console.ReadKey();
```

A. B. C. D.

Correct Answer: C

---

### QUESTION 3

A type-safe language prevents:

- A. Access to arbitrary memory locations.
- B. Memory leaks.

- C. Null reference exceptions.
- D. Division by zero exceptions.

Correct Answer: A

Type-safe code accesses only the memory locations it is authorized to access.

---

#### QUESTION 4

In the Common Language Runtime (CLR), what information is used to make decisions on security policy?

- A. Evidence
- B. Cryptography
- C. Code group
- D. Permissions

Correct Answer: A

The Evidence class defines the set of information that constitutes input to security policy decisions.

Note: Common forms of evidence include signatures and location of origin of code, but can potentially be anything. Objects of any type that are recognized by security policy represent evidence.

---

#### QUESTION 5

Which three policy types are .NET security policy levels? (Choose three.)

- A. Enterprise policy
- B. Data policy
- C. Network policy
- D. Machine policy
- E. Application domain policy

Correct Answer: ADE

The following table describes the four security policy levels provided by .NET Framework security.

\*

Enterprise policy

All managed code in an enterprise setting where an enterprise configuration file is distributed.

\*

#### Machine policy

All managed code on the computer.

\*

#### User policy

Code in all the processes associated with the current operating system user when the common language runtime starts.

\*

#### Application domain policy

Managed code in the host\\s application domain
