-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

#### DRAG DROP

You are interviewing for a job at Adventure Works, Inc. The hiring manager asks you to create a single console program.

The program takes multiple arguments from the command line and writes them to the screen in the same order as they were typed on the command line.

Which three code segments should you use to develop the solution? To answer, move the appropriate code segments from the list of code segments to the answer area and arrange them in the correct order.

Select and Place:

#### Code Segments

```
public static void main(String arguments) {
    for (int i = 0; i < arguments.length; i++) {
        System.out.println(arguments[i]);
    }
}

for (int i = 1; i <= Integer.parseInt(arguments[0]); i++) {
    System.out.println(arguments[i]);
}

public static void main(String[] args) {
    for (int i = 0; i < arguments.length; i++) {
```

#### Answer Area

Correct Answer:

#### Code Segments

```
public static void main(String arguments) {
    for (int i = 0; i < arguments.length; i++) {
        System.out.println(arguments[i]);
    }
}

for (int i = 1; i <= Integer.parseInt(arguments[0]); i++) {
```

#### Answer Area

```
public static void main(String[] args) {
    for (int i = 0; i < arguments.length; i++) {
        System.out.println(arguments[i]);
    }
}
```

### QUESTION 2

**DRAG DROP**

You are writing a Java program that collects patient information and stores it in a database.

You need to ensure that the program stores data using the least amount of memory.

Which data type should you use to complete each variable declaration? To answer, drag the appropriate data type from the column on the left to its code segment on the right. Each data may be used once, more than once, or not at all. You

may need to drag the split bar between panes or scroll to view content.

Select and Place:

**Data Types**

boolean    byte    char    float    short

**Answer Area**

```

 birthYear = 1974;
 exempt = false;
 initial = 'D';
 salary = 22123.5f;
  
```

Correct Answer:

**Data Types**

byte

**Answer Area**

```

short birthYear = 1974;
boolean exempt = false;
char initial = 'D';
float salary = 22123.5f;
  
```

**QUESTION 3**

**HOTSPOT**

You work on a team that develops e-commerce applications. A member of the team creates a class named DB that connects to a database. The class contains a method named query.

You need to initiate the DB class and invoke the query method.

How should you complete the code? To answer, select the appropriate code segments in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

## Answer Area

DB db =  ;

|          |
|----------|
| DB()     |
| new DB   |
| new DB() |

;

|            |
|------------|
| db.query() |
| DB.query   |
| query()    |

Correct Answer:

## Answer Area

DB db =  ;

|          |
|----------|
| DB()     |
| new DB   |
| new DB() |

;

|            |
|------------|
| db.query() |
| DB.query   |
| query()    |

### QUESTION 4

You need to evaluate the following code segment:

```
double dNum = 2.667;  
int iNum = 0;  
iNum = (int)dNum;
```

What happens when the code segment is run?

- A. iNum has a value of 0.
- B. An exception is thrown.
- C. iNum has a value of 2.
- D. iNum has a value of 3.

Correct Answer: C

---

## QUESTION 5

### HOTSPOT

You work as an intern Java programmer at Adventure Works. Your team lead asks you to create a method. The method must meet the following requirements:

Accept an int array

Check for duplicate values in the array

Stop the outer loop as soon as a duplicate value has been detected and return true

Return false if all values in the array are unique How should you complete the code? To answer, select the appropriate code segments in the answer area. NOTE: Each correct selection is worth one point.

Hot Area:

### Answer Area

```

public static boolean duplicate(int[] array) {

    boolean isDuplicate = false;

    for (   x++) {
        

|            |
|------------|
| x = 0;     |
| x = 1;     |
| int x = 1; |
| int x = 0; |

|                        |
|------------------------|
| x < array.length - 2;  |
| x < array.length - 1;  |
| x <= array.length;     |
| x <= array.length - 1; |

        for (int y = x + 1; y < array.length;  )
            

|           |
|-----------|
| x = x + 1 |
| y++       |
| y = y - 1 |
| x--       |

            if (array[x] == array[y])
                isDuplicate = true;

            if (isDuplicate)
                

|                      |
|----------------------|
| <input type="text"/> |
| break;               |
| switch;              |
| finally;             |
| continue;            |

        }

        return isDuplicate;
    }
}

```

Correct Answer:

### Answer Area

```
public static boolean duplicate(int[] array) {  
  
    boolean isDuplicate = false;  
  
    for (   
            
            
            
            
          x++) {  
  
        for (int y = x + 1; y < array.length;   
                
                
                
              )  
  
            if (array[x] == array[y])  
  
                isDuplicate = true;  
  
            if (isDuplicate)  
  
                  
                  
                  
                  
  
        }  
  
        return isDuplicate;  
  
    }  
}
```
