QUESTION 1

A tag with a well-formed SQL statement attempts to save a query object to the SESSION scope but generates a runtime error. When the same tag is executed with its name property pointing to a variable in local variables scope,

the tag succeeds without a runtime error.

What is the most likely reason for this?

A. Query objects cannot be saved to the SESSION scope.

B. The SESSION scope only allows a limited number of variables per user.

C. The SESSION scope allocates limited memory per user.

D. Session management must enabled in the current application.

Correct Answer: D

QUESTION 2
