QUESTION 1

You purchased a signed SSL certificate from a trusted CA and added it to your OS X Server computer. When you look at the certificate in Keychain Access, you see the message below. "Certificate authority's root certificate not trusted by your computer".

Which step is MOST LIKELY to solve the problem?

- A. Create a new certificate signing request for the server.
- B. Install the intermediate certificate from the trusted CA in the server's system keychain.
- C. Verify that you pasted in the new certificate correctly when you added it using Server app.
- D. Install the trusted CA's private key in the server's system keychain.

Correct Answer: D

QUESTION 2

What are TWO ways administrators can remove a device group profile from an OS X Mavericks computer? (Select 2)

- A. In Workgroup Manager, select the group, click Preferences and click the Delete (-) button.
- B. In the Profiles pane in System Preferences, select the profile, and click the Remove (-) button.
- C. In Profile Manager, click Device Groups, select the appropriate device group, click Members, and click the Delete (x) button to the right of the member computer.
- D. In Server app, select the group, click the Edit (pencil) button in the Group pane, and deselect Manage.
- E. In the Profiles tab in Device Manager, select the OS X Mavericks computer, select Profiles, select the group, and click the Delete (-) button.

Correct Answer: BE

QUESTION 3

What Messages service account name will this user have on the chat.pretendco.com server?

- A. chris_johnson@chat.pretendco.com
