QUESTION 1

Which three characteristics of SOA can make a business more agile?

- A. Defining rules for business
- B. Enforcing governance processes
- C. Creating components that can be shared
- D. Maintaining up-to-date application interfaces
- E. Building applications from reusable components
- F. Changing the implementation without affecting the consumers

Correct Answer: CEF

QUESTION 2

When releasing a new service version, which changes to the WSDL document are backwardcompatible?

- A. Adding an operation
- B. Removing an operation
- C. Renaming an operation
- D. Changing the parameters of an operation

Correct Answer: A

QUESTION 3

How does SOA achieve alignment between business and IT?

- A. By ensuring services represent the underlying IT functions that the business must use in order to function
- B. By hiding operational details allowing services to be loosely coupled and changed to suit the situation
- C. By creating business processes that are direct representations of the business which can be simulated and refined
- D. By providing service operations that represent business tasks allowing those operations to be used in whatever combination the business decides is appropriate

Correct Answer: D

QUESTION 4

Which situation is most appropriate for an SOA implementation?

- A. Customer's IT strategy is to use desktop applications.
- B. The organization relies on a homogeneous environment.
- C. Pilot and prototype development is a focus of the IT organization.
- D. Parts of an application need to be developed, maintained and updated independently.

Correct Answer: D

QUESTION 5

What is one architectural principle surrounding SOA?

- A. Inheritance
- B. Encapsulation
- C. Cross-cutting concern
