QUESTION 1

When a software defect in a system has been found and fixed, which of the following activities should be undertaken next?

a.

 Debugging.

b.

 Confirmation testing.

c.

 Regression testing.

d.

 System testing.

e.

 Static testing.

A.

a and b.

B.

b and c.

C.

c and d.

D.

c and e.

Correct Answer: B Case Study# 4Scenario

A bank is upgrading its systems to include an on-line investment service, allowing investors to trade with

each other, in a mini-stock market environment.

The upgrade will be carried out using Agile development (within the Scrum framework). Here, the iterations

are referred to as Sprints. For each Sprint the required functionality will be defined as a set of user-stories.

The user stories are typically 1-2 lines long, indicating what the business wants the system to do. These

user stories will be built then tested.

There will be 3 Sprints:

1) Creation of the mini-stock market trading environment.

2) Creation of additional front-end enhancements.

3) Linking to stock exchange for pricing.

You are the test manager. You lead a team of 4 testers, and there are 6 developers. Your team has worked on Agile projects previously, and on average, Sprints usually last 4 weeks. At the end of all Sprints, a full end to end test is carried out. This is called the E2E test phase. You are worried that 4 weeks will not be sufficient time for the first Sprint. You have decided to conduct a Risk Management exercise before the project starts.

QUESTION 2

You are convinced that delivery will be late. Which of the following reviews would be recommended at this time?

A. A management review of the test plan and results.

B. A walkthrough of the test plan and results.

C. A technical review of the user-stories.

D. An inspection of all code for the trading environment.

Correct Answer: A

QUESTION 3

Which of the following would be an entry criterion into site acceptance testing for the air quality monitoring system?

A. That the code written to fulfil the requirement to monitor carbon dioxide levels has been 100% path tested.

B. That the functional specification accurately reflects requirements R1 and R2.

C. That the system has been tested at levels of oxygen usage well beyond anticipated personnel levels.

D. That the requirements for temperature control have been signed-off.

Correct Answer: C

QUESTION 4

You need to test that the rules have been correctly set up in the configuration table, according to the specification. Which one of the following test design techniques would be most suitable for this?

A. Data flow testing.

B. Statement testing.

C. Decision table testing.

D. Boundary value analysis.

Correct Answer: C

QUESTION 5

Which of the following test design techniques would be most suitable for testing that the oxygen is released at the required times?

A. Decision Testing.

B. Statement Testing.

C. Data flow Testing.

D. Boundary Value Analysis.

Correct Answer: D
