QUESTION 1

Which of the following best describes the order in which this should be carried out?

a.

Decide which category of test design technique to use.

b.

Review test specifications.

c.

Write test procedures.

d.

Create test cases.

e.

Identify test conditions.

A.

a, b, d, e then c.

B.

b, e, a, d then c.

C.

b, a, d, c then e.

D.

e, b, a, d then c.

Correct Answer: B

QUESTION 2

When creating the functional specification for the temperature control system, which of the following review types would be most recommended to resolve any issues?

A. A walkthrough.

B. A technical review.

C. A management review.

D. A code inspection.

Correct Answer: B Case Study # 2Scenario

Your organisation is a large media services corporation (MSC). MSC uses Agile development, within a Scrum framework. Here, the iterations are referred to as Sprints.

For each Sprint, a set of user-stories is defined, built, and tested. The user-stories are typically 1- 2 lines long, indicating what the customer wants the system to do.

MSC is in the process of updating its website to meet the recently introduced accessibility rules for websites. Accessibility means the availability of a system suitable to members of the public with, for example, visual or hearing difficulties.

It has been decided to start with two requirements, as its first 2 Sprints:

1) Presentation of content with clear headings, short sentences, text versions always available.

2) Consistent navigation through the website.

You are the test manager and there are four developers and two testers. You have all worked together previously, and are very experienced in MSCs products. Although the accessibility rules are new to you and the team, you have all attended a workshop where they were explained.

QUESTION 3

When a software defect in a system has been found and fixed, which of the following activities should be undertaken next?

a.

 Debugging.

b.

 Confirmation testing.

c.

 Regression testing.

d.

 System testing.

e.

 Static testing.

A.

a and b.

B.

b and c.

C.

c and d.

D.

c and e.

Correct Answer: B Case Study# 4Scenario

A bank is upgrading its systems to include an on-line investment service, allowing investors to trade with

each other, in a mini-stock market environment.

The upgrade will be carried out using Agile development (within the Scrum framework). Here, the iterations

are referred to as Sprints. For each Sprint the required functionality will be defined as a set of user-stories.

The user stories are typically 1-2 lines long, indicating what the business wants the system to do. These

user stories will be built then tested.

There will be 3 Sprints:

1) Creation of the mini-stock market trading environment.

2) Creation of additional front-end enhancements.

3) Linking to stock exchange for pricing.

You are the test manager. You lead a team of 4 testers, and there are 6 developers. Your team has worked on Agile projects previously, and on average, Sprints usually last 4 weeks. At the end of all Sprints, a full end to end test is carried out. This is called the E2E test phase. You are worried that 4 weeks will not be sufficient time for the first Sprint. You have decided to conduct a Risk Management exercise before the project starts.

QUESTION 4

Which two of the following measures would give the best indication of likely product quality?

a.

 Number of hours of overtime worked.

b.

 Number of test runs.

c.

 Coverage of requirements achieved.

d.

Defect trends. e.Budget sent so far.

A.

a and c.

B.

b and d.

C.

c and d.

D.

a and d.

Correct Answer: C

QUESTION 5

Which one of the following test tools would you recommend for the E2E phase.

A. A configuration management tool to ensure that all user-stories have been properly archived.

B. A test design tool to create the test cases as efficiently as possible.

C. A performance test tool to check that anticipated loading can be handled.

D. A modelling tool to verify the stock exchange pricing structures.

Correct Answer: C
