QUESTION 1

Which workflow tasks can remove an association, not just replace it?

- A. Modify Records
- B. Delete Reference
- C. Associate Records
- D. Modify Metadata Records

Correct Answer: C

QUESTION 2

A new classification has been defined and the developer is ready to create the new classification's local root. From the Hierarchy pane the focus is placed on the Classification root node and the option New is selected. The new classification does not show up as an option in the Hierarchy pane drop-down as a valid child that can be added to the root.

What could be wrong?

- A. The new classification's form has not been added to the Includes/Forms tab of the new classification's form.
- B. The new classification's form has not been added to the Includes/Forms tab of the root classification form.
- C. The new classification's form has not been added to the Includes/Forms tab of the classification business object (BO).
- D. The new classification's form has not been added to the Includes/Forms tab of the new classifications BO.

Correct Answer: B

QUESTION 3

Which statement is true when choosing between using a smart section or locator field?

- A. A locator field allows live link; a smart section does not.
- B. A locator field can be overloaded with alternate data types; a smart section cannot.
- C. A smart section only creates an association; a locator field creates an association and a reference.
- D. A smart section can be mapped directly with data integrator using the keyword Associate; a locator field cannot.

Correct Answer: B

QUESTION 4

Which statement is true about deleting objects from an object migration import package?

- A. Objects cannot be deleted from an import package.
- B. Objects should be deleted after applying the import package.
- C. Only validated objects can be deleted from an import package.
- D. Objects should be deleted before applying the import package.

Correct Answer: D

QUESTION 5

A field level formula that depends on a query has been modified within a business object. The query did not change. Which cache must be cleared?

- A. UOM Data
- B. State Data
- C. Query Cache
- D. Extended Formula Cache

Correct Answer: D
