### QUESTION 1

What is depicted below?

- A. How the elements of the transformation model will be output to the columns of a dimension table.
- B. How the columns of the data source map to the elements of the transformation model.
- C. How the items in the DataStream will be output to the columns of a fact table.
- D. How the elements of the transformation model will be output to the columns of a fact table.
- E. How the items in the DataStream will be output to the columns of a dimension table.

Correct Answer: B

### QUESTION 2

A dimension table tracks employee data. If an employee's work location changes, the previous work location needs to be kept and a new record needs to be created. What kind of change is this?

- A. Type 0
- B. Type 1
- C. Type 2
- D. Type 3

Correct Answer: C

### QUESTION 3

What can Data Manager be used for?

- A. To create a content store.
- B. To extract operational data from multiple sources.

- C. To create a metric store.
- D. To build an IBM Cognos Planning application.

Correct Answer: B

---

#### QUESTION 4

A developer has created a lookup using a template (not a data source) for data access. Why would the developer do this?

- A. Data must be accessed from more than one table.
- B. The lookup attribute names are different from the source column names.
- C. The build will perform automatic surrogate key substitution.
- D. A derivation has been added to the lookup.

Correct Answer: C

---

#### QUESTION 5

What is a difference between a measure element and an attribute element?

- A. Attribute values can be aggregated by Data Manager, while measure values cannot.
- B. Measure values can be merged by Data Manager, while attribute values cannot.
- C. Attribute values can be merged by Data Manager, while measure values cannot.
- D. Measure values can be aggregated by Data Manager, while attribute values cannot.

Correct Answer: D
