QUESTION 1

A company has TM1 production servers scattered across the globe. The North American server contains the base data that is used by all servers globally. The source data for the North American TM1 Serverresides locally and is updated using an ODBC connection.

What is the optimal TM1 method for keeping the base data in the global TM1 servers consistent with the base data in the North American TM1 Server?

A. Send copies of the TM1 log files from the North American server to the administrator of each global TM1 server and have them process it against their local TM1 Server.

B. Have a compressed copy of the North American production TM1 Server\\'s data directory sent to the other global locations using FTP and restore this data onto each local TM1 Server.

C. Set up an ODBC connection to the North American production source data on each of the TM1 servers across the globe and run TurboIntegrator processes to update the global TM1 servers.

D. Set up a replication and synchronization nightly chore between the TM1 servers across the globe and the TM1 Server in North America.

Correct Answer: D
