QUESTION 1

Clark has deployed a 64-bit IBM Notes Traveler server. After adding 1500 devices, Clark would like to be sure the Java heap size is correctly set for his workload. What might Clark review to understand Notes Traveler Java memory usage?

- A. HTTPJVMHEAPSIZE notes.ini value's current setting
- B. Tell Traveler mem show to report current Java memory usage
- C. Tell Traveler JVM mem show to report current Java memory usage
- D. The 64-bit Java heap size is fixed at 8 GB,so there is no need to review usage.

Correct Answer: B

QUESTION 2

IBM Notes Traveler server uses LDAP remote directory for user look up.

How can an administrator map a non-standard field in LDAP to a field in the IBM Domino directory?

- A. VCARD XSLT
- B. Active Sync XSLT
- C. Directory Assistance Search Filter
- D. NTS_NAME_LOOKUP_ITEMS_EXT property

Correct Answer: D

QUESTION 3

What is updated in the IBM Notes Traveler server to direct the server to use high availability functionality?

- A. replication settings of the users's mail files
- B. replication settings of the lotusTraveler.nsf
- C. notes.ini parameter NTS_DBCONNECTIONURL
- D. external server URL to be the value of the IP Sprayer

Correct Answer: C

QUESTION 4

Luis has given Android devices to his team only to find that password monitoring is not working.

Which reason could be behind this problem?

- A. Devices are running Android 1.x.
- B. He must also deploy IBM Traveler Companion.
- C. Password monitoring is only supported on iOS.
- D. Password monitoring is supported only when running against an IBM DB2 server.

Correct Answer: A

QUESTION 5

Mike's company has deployed three IBM Notes Traveler servers in a virtual high availability environment. Server A has 2500 devices registered and Servers B and C have 2000 devices registered. Mike, the administrator, took Server A offline for Sunday's scheduled maintenance session. He tested failover to the other servers in the pool and it was successful. The following Monday morning, the Help Desk received calls reporting that users were not receiving mail on their devices. Mike was unsure as to why the users gradually stopped receiving mail on the remaining servers. Mike brought Server A back online and the problem was resolved.

Why did the users fail to continue to receive mail?

- A. Mike had not set the external server URL on Servers B and C.
- B. Mike did not set the IP sprayer to spray in a round-robin fashion.
- C. Mike failed over too many users and devices to the other servers in the pool.
- D. Mike did not properly add Servers B and C to the pool by issuing the travelerUtil command.

Correct Answer: C
