-  **800,000+** Satisfied Customers

QUESTION 1

A retailer recently upgraded their IBM Sterling Order Management from an older version to 9.1. While verifying the installation after the upgrade was completed, the resource manager found that the APIs were not returning data from the extended columns of product tables. The release manager believes the root cause to be a defective build process. Which aspect of the build process was defective?

- A. The build process was not using the correct version of the JVM to compile the custom classes.
- B. There is nothing wrong with the build process. Data from extended columns will not be carried over as part of an upgrade.
- C. In order to view data from extended columns, custom classes following the "data access object" pattern have to be written and compiled as part of the build process.
- D. The database extension xml was not present in the correct folder and hence the build process was not including it and did not detect any of the database extensions.

Correct Answer: D

QUESTION 2

A developer executes the Release Order agent to release all the orders that are in the Schedule status. On execution of the agent, the developer observes that some of the orders have not moved to the Release status. Where can the developer check for possible reasons for the orders not moving to the Release status?

- A. Check the YFS_Order_Header table to ensure that the order exists.
- B. Check the Task_Q_Key column of the YFS_TASK_Q table to ensure that it has the correct Order Number.
- C. Check the Available_Date column of YFS_TASK_Q table to ensure that the orders are available for processing.
- D. Check the ModifyUserId column of the YFS_Task_Q table to ensure that the user has permissions to modify the order status.

Correct Answer: C

QUESTION 3

A developer is implementing the reverse logistics module as part of an IBM Sterling Selling and Fulfillment Suite solution. The solution should allow for return orders to be created against a sales order and the linkage between return and sales orders should be maintained. What should be part of the implementation to achieve this?

- A. Configure the include In Return transaction in the sales order pipeline.
- B. Pass the IsBlindReturn attribute value as in the create Order API input.
- C. Pass the ReturnAgainstSale attribute value as in the createOrder API input.
- D. Set the enable Return Against Sales configuration under Reverse Logistics> Document Specific > Return Order > Fulfillment > ProcessSet the enable Return Against Sales configuration under Reverse Logistics> Document Specific >

Return Order > Fulfillment > Process Type Details in the Applications Manager.

Correct Answer: A

QUESTION 4

In a current implementation of IBM Sterling Selling and Fulfillment Suite, the Application and Agent Servers are running on an AIX Server. Which startup script will start the Health Monitor Agent?

- A. \$INSTALL_DIR/bin/agentserver.sh
- B. \$INSTALL_DIR/bin/triggeragent.sh
- C. \$INSTALL_DIR/bin/startHealthMonitor.sh
- D. \$INSTALL_DIR/bin/startHealthMonitor.sh CRITERIA_ID
- E. \$INSTALL_DIR/bin/startIntegrationServer.sh CRITERIA_ID

Correct Answer: C

QUESTION 5

Which three are required fields in the Agent configuration to establish communication between an Agent and a JMS Server?

- A. SIB Name
- B. Provider URL
- C. SIB Queue Name
- D. JMS Server Name
- E. JMS Queue Name
- F. QCF Lookup Name

Correct Answer: BEF
