QUESTION 1

The Sterling Connect:Direct for UNIX administrator needs to restrict the use of operating system commands and special characters in a run task or run job statement. What initialization parameter should be set?

- A. cmd=y
- B. ulimit=y
- C. log.command=y
- D. continue.on.exception=y

Correct Answer: A

QUESTION 2

A Sterling Connect:Direct administrator is attempting to configure two nodes, PNODE and SNODE to use Connect:Direct Secure+ to securely transfer files.

During the test, the administrator was able to review a trace and obtained the following trace information:

During the test, the administrator was able to review a trace and obtained the following trace information:

- PNODE sends a ClientHello message
- SNODE responds with a ServerHello
- SNODE sends certificate
- SNODE request certificate from the client
- SNODE sends a ServerHelloDone
- PNODE responds with a Certificate - immediate failure after this point.

Errors

SNODE:

CSPA311E - SSL certificate verification failed.
CSPA201E - Secure+ initialization failure.
CSPA309E - The SSL library returned an error during the handshake

PNODE:

CSPA309E - The SSL library returned an error during the handshake

What is the most likely cause of the problem?

- A. The SNODE has not enabled Secure+ for the PNODE.
- B. Either the PNODE or the SNODE is attempting to do Common Name verification.
- C. The PNODE does not have the Certificate Authority (CA) root certificate for SNODE in the CA trusted file.
- D. The SNODE does not have the Certificate Authority (CA) root certificate for PNODE in the CA trusted file.

Correct Answer: D

QUESTION 3

Using the Sterling Certificate Wizard, what certificate elements are needed to validate a keycert certificate file?
