QUESTION 1

What additional parameter is needed when using a database for an input, that is not used when using a database for output?

A. Query

B. Password

C. mdq file name

D. Database Name

Correct Answer: A

QUESTION 2

When building a map, the following build error message is displayed: M111 ERROR:

LegacyToNew Output: NewOrderRecord:NewSysFile Argument #2 for map F_MakeNewOrderRecord does not match type of input card #2.

What action should be taken to resolve the build error?

A. Move the functional map call to a different output object.

B. Change the order of the arguments in the functional map call.

C. Modify input card #2 in the functional map and change the Type.

D. Use a conversion function in the functional map to change the type of input card #2.

Correct Answer: C

QUESTION 3

Refer to the image shown here:

```
Function summary
Function          Iterations              Time
---------------------------------------------------
VALIDATE_CARD          2                   148
BUILD_CARD             2                   216
TYPE_NAME            165                    73
FLOAT_CONSTANT         9                     1
MULT_OP                8                     9
NONE                   8                     0
GETFILENAME            1                     0
COUNT                  1                     2
CURRENTDATE            9                     6
CURRENTTIME            1                     0
EXTRACT                8                    22
LOOKUP                 8                    28
ROUND                  8                    14
SUM                    1                     5
MAP_NAME               8                   162
TEXTTONUMBER           8                     6
ADDDAYS                1                     1
EITHER                 8                     3
```

Which map rule function takes the MOST time to run?

A. LOOKUP

B. MAP_NAME

C. TYPE_NAME

D. BUILD_CARD

Correct Answer: A

QUESTION 4

Which setting has the MOST negative impact on map performance?

A. Backup

B. Audit Log

C. Map Retry

D. Map Trace

Correct Answer: D

QUESTION 5

Refer to the image shown here:

A large corporation manufactures beds in different colors. The inventory file consists of three record types, a header, a detail, and bed color. The record type is the first byte of each record (H=Header, D=Detail, C=Color). If there is an error in one of the bed color records, all of the color records under that detail record should be ignored. How can an application developer specify that all color records should be ignored if one is found to be invalid?

A. Use the restart function in the map.

B. Use the restart attribute on the color record.

C. Use the restart attribute on the detail record.

D. Use the restart attribute on the header record.

Correct Answer: C
