QUESTION 1

Refer to the exhibit that appears below.

You are developing an ISD reference match job. The reference data is maintained in a database and must be referenced at runtime.

You have three passes in your match specification and the input is one record at a time. Which statement is true about the job design?

- A. Use normal lookup in the lookup stage.
- B. The Lookup stage should be replaced with Join stage.
- C. You can select reference data from the database using user defined SQL.
- D. You need to add two more Lookup stages to select necessary reference data.

Correct Answer: C

QUESTION 2

You need to create a batch delta match process for transaction records against a very large master file of existing clients.

Which QualityStage match option should be used?

- A. Transitive One-source match
- B. Two-source many-to-one match
- C. Deterministic One-source match
- D. Two-source many-to-many match

Correct Answer: A

QUESTION 3

A match pass is running a very long time. What is the most common first thing you should review?

- A. The Frequency file.
- B. The blocking strategy.
- C. The number of passes.
- D. The hardware environment.

Correct Answer: C

QUESTION 4

How can Word Investigation reports be used to modify a rule set?

- A. Corrects spelling errors in the data field.
- B. Adds tokens to allow identification of additional duplicates.
- C. Identifies new tokens to allow additional words to be classified.
- D. Identifies matched words to be used in match designer frequency distribution.

Correct Answer: A

QUESTION 5

A match review was just completed and determined that individuals with different middle names are being grouped together.

Which option would be effective in breaking these two individuals apart?

- A. Decrease the value of the m-prob for the middle name
- B. Set the override file A missing weight for middle name.
- C. Set the override disagreement weight for middle name.
- D. Set the override disagreement weight for primary name.

Correct Answer: C
