QUESTION 1

You created a job that uses the standardization stage with a new copy of USADDR rule set. The job was successfully compiled, but has an error and will not run.

What is most likely the cause of the problem?

- A. The input file is missing.
- B. The rule set is not provisioned.
- C. The server does not have enough memory.
- D. The rule set has an invalid statement in the pattern file.

Correct Answer: C

QUESTION 2

What rule file parses data to the output file?

- A. PAT
- B. CLS
- C. DCT
- D. PRS

Correct Answer: D

QUESTION 3

When building a field level survivorship routine and the same business rule applies to all address columns, what is the most efficient way to do this?

- A. Move all of the address columns to the target field and define a single rule.
- B. You must use the complex survive expression identifying each address field.
- C. Because logic is being applied at the field level all fields need to have a rule defined.
- D. Apply the survivorship rule directly to the available columns and not to the target column.

Correct Answer: B

QUESTION 4

Which statement is true about creating a Match Statistics report from a One-source match?

- A. You must use the Match Statistics stage.
- B. The One-source Match Statistics link target must be ODBC.
- C. The One-source Match Statistics link target must be a sequential file.
- D. The One-source Match Statistics link target can be any QualityStage supported target.

Correct Answer: A

QUESTION 5

What two rule groups are needed for rule sets?

- A. A rule group for rules that you want to apply to split a domain.
- B. A rule group for rules that you want to apply to records after all other actions.
- C. A rule group for rules that you want to apply to records before all other actions.
- D. A rule group for rules that you want to apply to records as they read a lookup table.
- E. A rule group for rules that you want to apply copies of records before all other actions.

Correct Answer: CD
