QUESTION 1

When a single file match is required where all records must be processed through every pass, what match type is required?

- A. One-source Dependent
- B. One-source All-Passes
- C. One-source Independent
- D. Two-source Many-to-one

Correct Answer: B

QUESTION 2

Which statement is true regarding Quality Stage data survivorship?

- A. Survivorship is used to create groups of duplicate records.
- B. The Survive stage is used to mark records as possible duplicates.
- C. The Survive stage is used after matched record groups have been identified.
- D. The Survive stage can be used to correct and identify unhandled data from the Standardize stage.

Correct Answer: C

QUESTION 3

When exporting a rule set to a .dsx file, what check box options should be selected?

- A. All check boxes are selected.
- B. No check boxes are selected.
- C. The Exclude Read Only items check box is selected and the Include Dependent Items check box is cleared.
- D. The Exclude Read Only items check box is cleared and that the Include Dependent Items check box is selected.

Correct Answer: A

QUESTION 4

If a token had the value 13D and the "D" had to be isolated in a variable named Temp, what Pattern Action code would be used?

- A. COPY [1] Temp

- B. COPY [1](c) Temp
- C. COPY [1](-n) Temp
- D. COPY [1](-c) Temp

Correct Answer: A

QUESTION 5

What two approaches to use when determining fields to use for blocking?

- A. Investigate the combination of fields to assess block sizes.
- B. Selecting which field to use will have little impact on the matching results.
- C. Select fields with high data frequencies even if default values are present.
- D. Each field should be investigated to determine completeness and validity.
- E. Use as few fields as possible in the blocking phase so more records are grouped.

Correct Answer: BE
