### QUESTION 1

Refer to the exhibit that appears below.

You are developing an ISD reference match job. The reference data is maintained in a database and must be referenced at runtime.

You have three passes in your match specification and the input is one record at a time. Which statement is true about the job design?

- A. Use normal lookup in the lookup stage.
- B. The Lookup stage should be replaced with Join stage.
- C. You can select reference data from the database using user defined SQL.
- D. You need to add two more Lookup stages to select necessary reference data.

Correct Answer: C

### QUESTION 2

Which of these statements is NOT true?

- A. NLS can only process multi-byte characters.
- B. NLS supports various languages and countries.
- C. You can process Japanese data in an English version of QualityStage.
- D. When installing a non-English language version of QualityStage, NLS is enabled automatically.

Correct Answer: B

---

### QUESTION 3

Which statement is true?

- A. A batch QualityStage match job must have a match statistics output link.
- B. You can override match designer cutoff thresholds within the QualityStage match stage.
- C. To add or remove output links in my QualityStage batch job, you must re-provision the match designer as well as re-compiling the batch match job.
- D. A comma delimited text file format is required for the match designer sample input data defined in the Test Environment tab in the match designer interface.

Correct Answer: C

---

### QUESTION 4
