QUESTION 1

One of the tables in your project contains a column that should not be available for analysis. Which option would accomplish this security?

A. Do not register the column to your project.

B. Do not grant drill down access to this column.

C. Do not import the column during meta data import.

D. Create a filter in the analysis settings using a Where clause.

Correct Answer: A

QUESTION 2

There is a requirement to test a numeric column ID against a desired output of "(15)". What is the correct rule logic to test for this situation?

A. val(ID, \\'(%c)\\') = \\'(15)\\'

B. tostring(ID, \\'(nn)\\') = \\'(15)\\'

C. tostring(ID, \\'(%i)\\') = \\'(15)\\'

D. to_char(ID, \\'(\(nn\))\\') = \\'(15)\\'

Correct Answer: C

QUESTION 3

Which statement is NOT true about data rule building?

A. Rule definitions are built with a rule builder or free form editor.

B. Rule logic can be linked with Boolean operators in the Condition field of rule builder.

C. Information Analyzer will parse all expressions from free form builder into rule builder.

D. Switching is allowed between the rule builder and free form builder while constructing rule definitions.

Correct Answer: C

QUESTION 4

What is a Virtual Table?

A. A data classification in the metadata management screen

B. A segmentation of data from a table for analysis purposes

C. A concatenation of data from one or more tables into one table

D. A baseline snapshot of data for comparison purposes to other baselines

Correct Answer: B

QUESTION 5

You are implementing a rule that evaluates the valid values for an Indicator field. What steps are necessary to tolerate a 1% error rate in the executed rule?

A. Open Data Rule workspace; on Overview tab, set Baseline Monitor to % Not Met
